- **1. Rationale:** Make the students to appreciate the materials used in automobiles. Introduce the students to different fasteners and drives used in automobiles. Prepare the students to perform basic service and manufacturing activities.
- **2. Course Outcomes:** At the end of the Course, the student will be able to:

| CO-01 | Make use of different measuring instruments following standard procedures.                           |
|-------|--|
| CO-02 | Identify the properties and applications of different materials used in automobiles.                 |
| C0-03 | Illustrate the concept of different types of fasteners, bearings and drives in automobiles.          |
| CO-04 | Demonstrate the essential manufacturing process used in automobile industries.                       |
| CO-05 | Illustrate the working of IC Engines and measure the different parameters of the vehicle and engine. |

#### 3. Course Content:

| Week | СО | PO      | Theory   | Practice  |
|------|----|---------|--|---|
| Week | CO | Ю       | (4 Hours per week)   | (4 Hours per week)  |
| 1    | 1  | 1,4     | Introduction to units of measurement system, system of units-CGS, FPS, MKS and SI system. Derived units-area, volume, and pressure, Conversion of units from one system to other system.                                   | Practice on use of vernier caliper, outside micrometer, inside micrometer, telescopic gauge.  Calculate the area and volume of regular geometrical objects using measuring instruments. |
| 2    | 2  | 1,4,5,7 | Classification of materials, ferrous materials-properties, types. Cast iron-properties, types, applications. Steel-properties, types, applications. Non-ferrous metals-properties, types. Copper-properties, applications. | Identify the different types of metals. Identify different Ferrous metals. Check and recognise the Physical properties of Ferrous metals.   |
| 3    | 2  | 1,4,5,7 | Aluminum-properties, applications. Merits and Demerits   | Identify different non-ferrous metals. Check and recognise the Physical   |

|    |   |         | of nonferrous materials. Steel  | properties of nonferrous metals.  |
|----|---|---------|---|---|
|    |   |         | Alloys-Concept, need,   | properties of nonterrous metals.  |
|    |   |         | applications. Copper alloys-types,  |   |
|    |   |         | properties, applications. plastics-   |   |
|    |   |         | properties, types.  |   |
| 4  | 2 | 1,4,5,7 | Thermoplastic-properties, applications. thermoset plastic-properties, applications. Environmental effects of plastics. Glass- properties, applications. Ceramics- properties, applications, | Identification of different plastics, glasses, composites, and ceramics.  Check and recognise the physical properties of different materials.   |
|    |   |         | Composite materials- types, applications, merits, and demerits.   | Practice on riveting and de-riveting.   |
|    |   |         | Fasteners –concept, types. Riveting- Introduction, types, but   | Identify different parts of rivet and types of riveting.  |
| 5  | 3 | 1,4     | joint and lap joint, applications. Welding-concept, types, applications. soldering-concept, applications. brazing-concept, applications.  | Practice on riveting and de-riveting. Practice on soldering process.  |
|    |   |         | Screw thread terminology, Types   | Identify and Practice on removal and  |
| 6  | 3 | 1,4     | of screw fastenings, Types of locking methods.  Forms of screw threads- British standard Whitworth (B.S.W.)   | refitting of bolts, screws, and studs. Practice tightening fasteners with specified torque using a torque wrench.   |
| O  | 3 | 1,1     | thread, square thread, ACME thread  | Practice locking bolts and nuts using different locking methods.  Identification of different types of  |
|    |   |         |   | thread and check the pitch using a pitch gauge.   |
| 7  | 3 | 1,4     | Keys-concept, types. Construction of Tapered sunk key and woodruff Key. Splines-applications. Couplings-concept, types. Unprotected type flange couplingworking, applications.              | Practice on identification and replacement of different types of keys.  Practice on removal and refitting of machine parts from splines.  Practice on removal and refitting of flange coupling. |
|    |   |         | Shaft-meaning, types, applications.   | Identification of different types of  |
| 8  | 3 | 1,4     | Power transmission – introduction, types. Working of Belt drive - open and cross belt drives, working of chain drives, Working of gear drives – simple and compound. Gear trains.           | belts, Practice on replacement of belts, and adjustment of belt tension. Practice on replacement and tension adjustment of Chain drives. Lubrication of chain drives.                           |
|    |   |         | Comparison of belt drives, chain drives, gear drives and applications.  | Calculation of speed ratio of belt, chain, and gear drive.  |
| 9  | 3 | 1,4     | Bearings-need, types. Construction-shell bearing, ball bearing, roller bearing, thrust bearing, Applications.   | Identify different parts of the bearing. Practice checking, removing, and refitting shell and ball bearings using appropriate tools.  |
| 10 | 4 | 1,4     | Casting concept, types, applications. Pattern- concept,   | Practice making moulds using moulding sand.   |

|    |   |     | types. forging-concept, types, applications.  Extrusion-concept, types, applications.  | Practice creating a pointed rod using the forging process.            |
|----|---|-----|--|---|
| 11 | 5 | 1,4 | Automobile – introduction, classification. Vehicle terminology – Wheelbase, wheel track, ground clearance, front and rear overhang, overall height, overall width, overall length, gross weight, Kerb weight.  Chassis layout – 2-wheeler and 4-wheeler. | track, ground clearance, front and rear overhang, overall height, and |
| 12 | 5 | 1,4 | Engine terminologies – bore, stroke, TDC, BDC, swept volume, clearance volume, total volume, and compression ratio.  IC engines – introduction, classification.  |   |
| 13 | 5 | 1,4 | Working of 4-stroke SI and CI engine, 2-stroke petrol engine, Comparison of 2 and 4 stroke engine, comparison of SI and CI engine.   | cylinder petrol engine and identifying                                |

#### 8. Suggestive Activities:

The List is only shared as an Example and not inclusive of all possible activities of the course. Student and Faculty are encouraged to choose activities that are relevant to the topic and on the availability of such resources at their institution.

| Sl. No. | Suggestive Activities for<br>Tutorials  |
|---------|---|
| 01      | Collect information on different measuring instruments and prepare a report.  |
| 02      | Collect different samples of materials and descriptions of each.              |
| 03      | Collect different types of bearings, and compare and list their applications. |
| 04      | Collect the specifications of different vehicles                              |
| 05      | Collect different types of gear and list their application                    |
| 06      | Collect different components of the IC engine and list their features.        |

### **9.** Rubrics for Assessment of Activity (Qualitative Assessment)

| Sl.<br>No. | Dimension                           | Beginner            | Intermediate               | Good   | Advanced   | Expert  | Students<br>Score |
|------------|-------------------------------------|---------------------|----------------------------|--|--|---|-------------------|
| NO.        |                                     | 2                   | 4                          | 6  | 8  | 10  | Score             |
| 1          | Collection of data/ Material        | Limited information | Collects basic information | Collects more information                            | Collects<br>developed<br>information             | Collects a great deal of information                | 8                 |
| 2          | Quality of data                     | Irrelevant          | Less relevant              | Needs improvement                                    | Satisfactory                                     | Very<br>relevant                                    | 6                 |

## 11. Equipment/software list with Specification for a batch of 30 students

| SN | Particulars Particulars                          | Specification                 | Quantity |
|----|--|-------------------------------|----------|
| 1  | Open end spanner set.                            | Drop forged (6 to 32mm) 12 pc | 02       |
| 2  | Ring spanner set.                                | Drop forged (6 to 32mm) 12 pc | 02       |
| 3  | Tubular spanner set.                             | Drop forged (6 to 32mm) 12 pc | 02       |
| 4  | Socket set.                                      | Drop forged (6 to 32) 27 pc   | 02       |
| 5  | Allen key set.                                   | 1.5 to 10mm (9 pc)            | 02       |
| 6  | Pipe wrench.                                     | 10 inches                     | 02       |
| 7  | Adjustable screw wrench.                         | 0 to 30mm 10 inch             | 01       |
| 8  | Adjustable screw wrench                          | 0 to 19mm 6 inch              | 01       |
| 9  | Torque wrench.                                   | 20 to 100Nm                   | 02       |
| 10 | Water pump pliers.                               | 250mm                         | 02       |
| 11 | Vice grip pliers.                                | 250mm                         | 02       |
| 12 | Combination pliers.                              | 200mm                         | 02       |
| 13 | Nose pliers.                                     | 165mm                         | 02       |
| 14 | Circlip pliers. (inside, outside, straight bent) | 180mm                         | 02 each  |
| 15 | screw driver (star, flat).                       | 8 pc                          | 02 set   |
| 16 | Hammers (ball peen, sledge).                     | 500g, 5kg                     | 02 each  |

| 17 | Mallets.                                  | Steel handle 500g                      | 02      |
|----|---|--|---------|
| 18 | Wheel spanners.                           | 18 mm                                  | 02      |
| 19 | 1   | 18 inches                              | 02 each |
|    | Pneumatic wrench.                         | 340 Nm                                 | 02      |
| 21 | Electrical wrench.                        | 188Nm                                  | 02      |
| 22 | Spark plug spanner.                       | 6-22 mm                                | 02      |
| 23 | Chisels.                                  | 12 to 38mm 5pc                         | 02 each |
| 24 | Punches (hallow, solid)                   | 7 pc                                   | 02 each |
| 25 | scrapers.                                 | Triangular scrapers                    | 02 each |
| 26 | Files.                                    | Soft grip handle set of 9              | 02 each |
| 27 | Speed handle.                             | 1/2 inch                               | 02      |
| 28 | Oil can.                                  | ½ pint capacity                        | 02      |
| 29 | Tyre pressure gauge.                      | 12x5x2 cm                              | 02      |
| 30 | Compression gauge.                        | 28x25x5 cm                             | 02      |
| 31 | Vacuum gauge.                             | 38x89x67 mm                            | 02      |
| 32 | Feeler gauge.                             | 20x20x5 cm                             | 02      |
| 33 | Bench vice.                               | 6 inches jaw opening                   | 02      |
| 34 | Leg vice.                                 | o menes jaw opening                    | 01      |
| 35 | Arbor press.                              | 1 ton capacity                         | 01      |
| 36 | Two-wheeler lifting platform.             | Suitable up to 500Kg                   | 01      |
| 37 | Spark plug cleaning and testing machine.  | Adjustable Spark Tester with Two       | 01      |
| 0, | Spark prag creaming and testing machine.  | Spark Plug Socket, 100 240v with       |         |
|    |   | Protective Cover Ignition Tester.      |         |
|    |   | Heat Resistance Spark Tester           | 01      |
|    |   | Automotive Tools for 10mm,14mm         |         |
|    |   | &16mm Spark Plug                       |         |
| 38 | Valve spring compressors.                 | C Type                                 | 02      |
| 39 | Oil filter wrench.                        | Chain type & Belt type                 | 01      |
| 40 | Trays. (1X1mt).                           | 1X1mt                                  | 08      |
| 41 | Two stroke single cylinder petrol engine  | 50 to 150CC engine                     | 02      |
| 43 | Four stroke single cylinder petrol engine | 150 CC air cooled engine               | 02      |
| 43 | Four stroke Multi cylinder petrol engine  | 800 - 1500 CC water cooled engine      | 02      |
| 44 | Four stroke single cylinder diesel engine | 350-500CC water cooled engine          | 02      |
| 45 | Four stroke Multi cylinder diesel engine  | 1.5 to 2L engine                       | 02      |
| 46 | Two-wheeler chassis                       | Motor cycle                            | 01      |
| 47 | Three-wheeler chassis                     | Auto rickshaw                          | 01      |
| 48 | Four-wheeler chassis                      | LMV                                    | 01      |
| 49 | High pressure car washer.                 | Operating pressure -4 to-45bar, Motor  | 01      |
|    |   | rating – 2.5 to 4.5hp, Flow rate -015  | 01      |
|    |   | to 15 LPM.                             | 0.1     |
| 50 | High pressure greasing bucket.            | Bucket capacity – 40L, Grease          | 0.1     |
|    |   | transmission rate – 0.7to 0.85 LPM.    | 01      |
| 51 | Air compressor.                           | Two stages, 3 Phase, tank capacity –   |         |
|    | r   | 200 to 300L, Discharge pressure – 10   | 01      |
|    |   | to 12 Bar.                             |         |
| 52 | Bearing Puller                            | 3 Jaw                                  | 01      |
|    | Two post lift.                            | Hydraulic type, Lifting capacity – 4   |         |
| 53 |   |  |         |
| 53 |   | Tons, Min. lifting height – 100 to 115 | 01      |

|    |  | to 1800mm                           |         |

#### 4. Rationale:

The power transmission from engine to wheel decides the vehicle's efficiency and handling. The student should appreciate the need for each component of power transmission system. The student should justify the constructional features of each component of transmission system. The student should be able to troubleshoot and service each transmission and control system component for the safe and efficient use of automobiles.

#### **5. Course Outcomes:** At the end of the Course, the student will be able to:

| CO-01 | Perform maintenance and troubleshooting activities of the transmission system and its     |
|-------|---|
| CO-01 | components.   |
| CO-02 | Perform maintenance and troubleshooting activities for the steering system and its        |
| CO-02 | components.   |
| CO-03 | Perform maintenance and troubleshooting activities for the Braking system and its         |
| CO-03 | components.   |
| CO-04 | Perform maintenance and troubleshooting activities for the Suspension system, Wheels, and |
| CO-04 | tyres.  |

#### 6. Course Content

| WEEK | CO | PO    | Theory   | Practice  |
|------|----|-------|--|---|
|      |    |       |  |   |
| 1    | 1  | 1,2,4 | Clutch- Introduction Purpose, Requirements, Principle, Classifications. Clutch Lining materials.  Construction and working of single plate clutch - Coil Spring type & Diaphragm type. | Removal and refitting of clutch from vehicle. Servicing of Coil Spring type single plate clutch. Trouble shooting of single plate clutch. |
| 2    | 1  | 1,2,4 | Construction and Working of<br>Centrifugal clutch and Multiplate<br>clutch. Clutch operating<br>mechanism, Clutch adjustment.  | Servicing of centrifugal and multiplate clutch.   |
| 3    | 1  | 1,2,4 | Gearbox-Necessity, classification. Construction and  | Servicing of gear box and Find gear ratios.   |

| 4 | 1 | 1,2,4  | working of Constant mesh gear box and synchromesh gear box, Synchronizer-working, gear selector mechanism-types, working of floor mounted gear shift mechanism.  Propeller shaft-function, construction of propeller shaft, universal joints & slip jointsfunction, types.  Construction & working of cross | Trouble shooting of synchromesh gear box.  Servicing of a propeller shaft & universal joint. Check constant velocity joint for wear & tear.  |
|---|---|--------|---|--|
| - | - | -,-, . | or spider type and flexible ring<br>type. Constant velocity joints-<br>need, types. working of Rzeppa<br>joint and Tripod joint.  |  |
| 5 | 1 | 1,2,4  | Final drive- Purpose, types.  Differential- necessity, principle. construction & working of differential.   | Overhauling of differential. Practice on checking and adjustment of Backlash. Calculate the final drive gear ratio.  |
| 6 | 1 | 1,2,4  | Construction and operation — hotch kiss and torque tube drive Rear axle-types of load acting, Types of rear axles.  Construction of fully floating, semi-floating and ¾ floating.   | Practice on Servicing of rear axle.  Troubleshooting of fully floating axle housing.  Servicing semi-floating axle housing.  |
| 7 | 2 | 1,2,4  | Front-Axle-types, construction of live (drive shaft)-dead axle (conventional), stub axles-types  Steering-system-purpose, requirements, mechanisms-types, Ackerman mechanism- layouts, steering gear box-need, types. construction and working of Rack & Pinion Steering gear box.                          | Overhauling of a front axle & hub greasing.  Identification different parts of steering mechanism.  Servicing of rack & pinion type of steering.  Trouble shooting of rack and pinion steering gear mechanism. |
| 8 | 2 | 1,2,4  | Construction and working of worm and re-circulating ball nut type steering gear box, steering geometry-concept, concept and need of camber, caster, king pin inclination, combined angle, toe in and toe out.   | Servicing of worm and recirculating ball nut type steering. Check and adjust the wheel alignment of vehicle.   |
| 9 | 3 | 1,2,4  | Braking system-purpose, Requirements of automobile brakes - types of braking systems, Layout of hydraulic braking   | Adjustments of mechanical brakes of two-wheeler.   |

|    |   |       | system, Construction and working of Tandem master cylinders.  | Servicing of Tandem master cylinder.  |
|----|---|-------|---|---|
| 10 | 3 | 1,2,4 | Wheel cylinder —types, construction and working of double acting wheel cylinder, Constructional details of Internal expanding shoe brakes, concept of trailing and leading shoes, shoe materials, disc brakes —construction and working, Advantages and limitations of disc brakes. | Bleeding of hydraulic brake system, free-play & brake shoe adjustments.  Servicing & trouble shooting of a drum brake & Disc brake.   |
| 11 | 4 | 1,2,4 | Suspension system-functions, Requirements of a good suspension system, Construction and working of rigid axle suspension, construction and working of McPherson strut, double wishbone, trailing link and Semi-independent suspension systems.                                      | Servicing of rigid axle and independent suspension system.  Troubleshooting of suspension system.   |
| 12 | 4 | 1,2,4 | Types of springs used in suspension system –construction of leaf spring, coil spring, and Torsion bar, working of Stabilizer bar, sprung and un sprung weight-concept. Need of shock absorber, Working of Telescopic shock absorber -   | Servicing of leaf spring. Checking the stiffness of coil spring. Removing and refitting of telescopic shock absorber.   |
| 13 | 4 | 1,2,4 | Wheels-requirements-types, Constructional details-wire-discalloy wheel. Tires-function-types- construction-tube-tubeless, radial type, treads pattern – need, aspect ratio and specifications.  | Practice on removing and refitting of wheel from vehicle by using proper tools and identify tyre and disc specifications.  Hot and cold tyre puncture practice.  Check and repair of puncture in tube less tyre.  Check and adjust wheel balancing. |

#### **10. Suggestive Activities for Tutorials:**

The List is an example and not inclusive of all possible activities of the course. Student and Faculty are encouraged to choose activities that are relevant to the topic **Two activities**, each for **50 marks** should be evaluated with proper rubrics.

| Sl.No. | Suggestive Activities for Tutorials  |
|--------|--|
| 01     | Visit authorized service station for four-wheeler and prepare a service station layout   |
| 02     | Collect different types of clutches and prepare a report.  |
| 03     | Visit nearby garage and collect information on Different types of gear boxes and prepare a report.   |
| 04     | Visit nearby garage and collect information on Different types of final drives (single reduction and double reduction) and prepare a report. |
| 05     | Visit nearby service station and collect information on Different types of steering gear boxes.  |
| 06     | Visit tyre sale show room and prepare a detailed report containing information on tread pattern, radial, bias, aspect ratio etc.             |

| 1  | b) sketch and laber the parts of diaphragin spring clutch. | L3       |   | О   |
|    | a) Summarize the requirements of a good clutch.            | L2       | 1 | 4   |
| 2  | b) Sketch and label the parts of Multi plate clutch.       | L3       |   | 6   |
| 2  |  |          |   |     |
|    | Section -2   |          |   |     |
|    | a) Explain the working of Synchromesh gearbox with neat    | L3       | 1 | 10  |
| 3  | sketch.  | 20       |   |     |
|    | a) Explain the working of gear selector mechanism with a   | L3       | 1 | 10  |
|    | neat sketch.   | ь        | 1 | 10  |
| 4  | neat sketch.   |          |   |     |
|    | Section -3   |          |   |     |
|    |  |          | 1 | 1   |
| _  | a) Explain the necessity of differential.                  | L3       | 1 | 4   |
| 5  | b) Sketch and label the parts of Hotch kiss drive.         |          |   | 6   |
|    | b) Explain the construction of differential with a neat    | L3       | 1 | 10  |
| 6  | sketch.  |          |   |     |
|    | Section -4   |          | • |     |
|    | a) Differentiate live and dead axle.                       | L2       | 2 | 4   |
| 7  | b) Explain Caster and camber.                              | L3       | _ | 6   |
| •  |  | L2       | 2 | +   |
|    | a) Discuss the purpose of steering system.                 | L2<br>L3 | 2 | 4 6 |
| 8  | b) Explain recirculating ball and nut type steering        | L3       |   | О   |
| O  | gearbox.   |          |   |     |
|    | Section -5   |          |   |     |
|    |  |          |   | -   |
|    | a) List requirements of automobile brakes.                 | L2       | 3 | 4   |
| 9  | b) Explain Double wish bone suspension system              | L3       | 4 | 6   |
|    | a). List the types of automobile brakes.                   | L2       | 3 | 4   |
|    |  |          |   |     |
| 10 | b) Illustrate the tube less tyre construction.             | L3       | 4 | 6   |

13. SEE-Model Theory Question Paper-2

| Program     | Automobile Engineering             | Semester | II        |
|-------------|------------------------------------|----------|-----------|
| Course Name | Vehicle Transmission and Stability | Marks    | 50        |
| Course Code | 25AT21I                            | Duration | 90<br>Min |

**Note:** Answer any one full question from each section. Each full question carries equal marks.

| Q No | Questions   | Cognitive<br>Levels | Course<br>Outcomes | Marks  |  |  |  |  |  |  |  |
|------|---|---------------------|--------------------|--------|--|--|--|--|--|--|--|
|      | Section -1  |                     |                    |        |  |  |  |  |  |  |  |
| 1    | a) State the requirements of clutch. b) Explain the working of centrifugal clutch with a neat sketch.                         | L1<br>L2            | 1                  | 10     |  |  |  |  |  |  |  |

- **7. Rationale:** The automobile has various electrical systems for its efficient working. The student must justify the use of various electrical systems in automobiles. The student should also be able to perform trouble shooting and service activities of electrical components and systems.
- **8. Course Outcomes:** At the end of the Course, the student will be able to:

| CO-01 | Perform the Service and troubleshooting activities of different Batteries of automobile.     |
|-------|--|
| CO-02 | Perform the Service and troubleshooting activities of charging and Starting systems.         |
| CO-03 | Perform the Service and troubleshooting activities of ignition systems and their components. |
| CO-04 | Perform the Service and troubleshooting activities of Lighting and accessories.              |

#### 9. Course Content:

| WEEK | CO | PO    | Theory   | Practice  |
|------|----|-------|--|---|
| 1    | 1  | 1,2,4 | Battery -Purpose, types, construction and working of Lead acid battery.  Battery capacity- Concept, types, Concepts of Reserve capacity.  Battery efficiency, Concept of Ampere hour rating, Cold rating, twenty-hour rating. Charging the Battery- Types, Illustrate the constant voltage and constant current methods of charging. | Conduct an experiment to check the battery charge condition using hydrometer, Voltmeter.  Test the battery condition using a battery tester.  Practice Preparation of electrolyte and charging of battery.  Practice on finding the defects and troubleshooting of batteries. |
| 2    | 1  | 1,4,5 | Lithium-ion battery – Types,<br>Construction and working of  | Demonstrate the Circuit diagram for Earth return  |

| 3 | 2 | 1,2,4 | Lithium-ion battery. Comparison of Lead acid and lithium-ion batteries.  Types of circuits-circuit diagrams of Earth return system, insulated wire return system-merits and demerits.  Charging system  Illustrate the different Electrical symbols.  Charging system-purpose-circuit diagram with DC generator, D C generator-principle, Alternator charging circuit, Alternator-working principle, construction and working. electronic voltage regulators-construction and working, comparison between generator and alternator. | system (Positive and negative) and insulated wire return system.  Practice safe disposal of batteries.  Practice on Servicing of dc generator and testing.  Practice on Servicing of alternator and testing.  Troubleshooting of charging system. |
|---|---|-------|---|---|
| 4 | 2 | 1,2,4 | Staring system- Requirements, circuit diagram, working principle, construction and working of seriesshunt wound motor, Drive mechanism-need-types, construction, and working-Standard Bendix drive-positive engaging drive with shift lever and over running clutch drive.  | Practice on Servicing of starter motor.  Practice on Servicing of starter motor drives.  Trouble shooting of starting system.   |
| 5 | 3 | 1,2,4 | Ignition system  Requirement types, battery coil ignition system-circuit diagramfunction of each component, Ignition coil-function-construction and working.  | Practice to build ignition circuit  Practice on setting of ignition timing  Trouble shooting of ignition system   |
| 6 | 3 | 1,2,4 | Magneto ignition system-circuit diagram of High-tension rotating magnet type ignition system-function of each component, Working with the Electronic Ignition system, and Distributor less ignition system.   | Practice on Servicing of magneto ignition system.  Trouble shooting of magneto ignition system.   |
| 7 | 3 | 1,4   | Spark plug-classification-construction-specification, spark plug gap, heat range and reach-types, Hot and cold plugs, definition, and importance Firing order-definition-need Repair cost estimation of ignition system.  | Practice on servicing of spark plug and setting of gaps.  Practice on testing spark plugs using spark plug testing machine.  Practice identification of engine condition by observing the condition of spark plug terminals.                      |

|    | т. | Ι     |  |   |
|----|----|-------|--|---|
| 8  | 4  | 1,4   | Lighting system Circuit diagrams of head light-parking light, side indicator, brake light, reverse gear light, Head light-construction, bulbs Different types of bulbs-applications.                       | Practice on replacement of bulb assemblies and relays. Practice on aiming of head lights.   |
| 9  | 4  | 1,2,4 | Construction and working of Halogen head light bulb, HID bulb, LED bulb, merits, and demerits. Fuses-need-types.   | Practice on replacing bulbs<br>and fuses with safe disposal.<br>Practice on finding open and<br>short circuits of lighting<br>system. |
| 10 | 4  | 1,4   | Accessories Construction and working of windscreen wipers, Horn, Electrical fuel pump. Construction of electrically adjustable outside rear view mirrors.  | Practice on servicing of wiper motor and linkages. Practice on replacing wiper blades. Practice on servicing and tuning of horn.      |
| 11 | 4  | 1,2,4 | Construction and working of analog type electrical fuel gauge, oil and temperature gauge, Speedometer, odometer.   | Service and trouble shoot<br>the circuits of electrical fuel<br>gauge, oil and temperature<br>gauge, Speedometer, and<br>odometer.    |
| 12 | 4  | 1,4   | Switches – Types, construction and working of Pushbutton and Solenoid switch.  Construction and working of Dim-Dipper switch.  | Practice on replacement of switches  Practice on fault finding in the lighting circuit.   |
| 13 | 4  | 1,3,4 | Wiring harness-meaning, need. Different types of cable connectors, wire specifications, color code of wires used in automobile circuits. Draw the Combined wiring diagram of two-wheeler and four-wheeler. | Construct and demonstrate the two-wheeler and four-wheeler circuit diagrams.  |

#### **8. Suggestive Activities for Tutorials:**

The List is an Example and not inclusive of all possible activities of the course. Students and Faculty are encouraged to choose activities that are relevant to the topic

| Sl.No. | Suggestive Activities for<br>Tutorials                               |
|--------|--|
|        | Construct a circuit of chargers and prepare detailed report          |
| 01     |  |
|        | Construct a earth return circuit and prepare a detailed report.      |
| 02     |  |
| 03     | Prepare a trouble shooting chart for charging system                 |
| 04     | Prepare a trouble shooting chart for starting system                 |
| 05     | Construct a battery coil ignition circuit to prepare detailed report |
| 06     | Build completes a car wiring circuit and prepare detailed report     |

Note: two activities, each activity for 50 marks with proper rubrics.

9 Rubrics for Assessment of Activity (Qualitative Assessment)

| Sl.                                    | Dimension                       | Beginner            | Intermediate              | Good   | Advanced  | Expert  | Students |  |
|--|---------------------------------|---------------------|---------------------------|--|---|---|----------|--|
| No.                                    |                                 | 2                   | 4                         | 6  | 8   | 10  | Score    |  |

#### 1. Rationale:

I.C. engines are still the primary power source of automobiles. The student needs to justify different constructional features of components of IC engines. The students also need to develop skills to maintain and service the IC engines to keep them working efficiently.

2. **Course Outcomes: At** the end of the Course, the student will be able to:

| CO-01 | Perform different servicing activities of IC engine components using proper tools with standard procedure. |
|-------|--|
| CO-02 | Perform different servicing and maintenance activities of engine fuel feed system and manifolds.           |
| CO-03 | Perform different servicing and maintenance activities of engine cooling system.                           |
| CO-04 | Perform different servicing and maintenance activities of engine lubrication system                        |

#### 3. Course Content

| WEEK | CO | PO      | Theory   | Practice   |
|------|----|---------|--|--|
| 1    | 1  | 1,2,4,5 | Introduction to Engine component- Cylinder head- Function, Types, Construction, Materials. Cylinder Head Gasket- Function, Types Crankcase- Function, Construction, Materials. | Disassemble, clean, and inspect cylinder heads. Practice of Decarbonising the Cylinder Head and list the importance. Check the Cylinder head twist and wrap. Practice the Surface grinding of cylinder head. |
| 2    | 1  | 1,4,5   | Cylinder block - Function, Types,<br>Construction, Materials.<br>Cylinder Liner- Function, Types,<br>Construction. Causes and effects of<br>uneven wear of cylinders.          | Check the Taperness and ovality of cylinder bore using dial bore gauge.  Practice on performing reboarding using proper tools and process.   |
| 3    | 1  | 1,4     | Valves - Function, Types,  | Disassemble, clean, and  |

|   |   |       | Construction, Materials. Sodium cooled Valves – Function, Construction.  Valve Mechanism- Types, Construction and Working of Overhead valve and Overhead Cam Mechanism.  Tappets- Function, Types.  | inspect Valves and Springs. Practice on Reconditioning of Valve and Valve lapping. Practice on checking and adjusting the tappet clearance. Reassemble the valve into the head.                  |
|---|---|-------|---|--|
| 4 | 1 | 1,2,4 | Piston- Requirements, Function, Types, Construction, Materials. Types of Piston head, Piston Clearence, Piston Expansion Control methods, Construction -T slot type. Bi-metal piston.   | Perform the Ridge reaming process. Disassemble, clean, and inspect Piston. Practice on Checking the Ring groove for Wear and Cleaning the carbon from a ring groove using a ring groove cleaner. |
| 5 | 1 | 1,2,4 | Piston Ring – Function, Types, Construction, Material. Piston Ring Terminology. Piston Pin - Function, Construction, Material. Piston Pin retaining Method, Construction – Fully floating method  | Disassemble, clean, and inspect Piston Rings and check the End gap. Disassemble, clean, and inspect Piston pin. Reassemble the piston ring and pin.  |
| 6 | 1 | 1,2,4 | Connecting Rod- Function, Construction, Material. Crankshaft - Function, type, Construction, Material. Camshaft - Function, Construction, material.   | Check and adjust the Alignment of Connecting rod. Disassemble, clean, and inspect Crankshaft, inspect for crack detection using magnetic crack detector.   |
| 7 | 1 | 1,4   | Flywheel - Function, Construction, Material.  Valve drive trains – timing Belt, gear, and chain  Vibration damper- Need, Types, Construction of rubber crankshaft damper.   | Disassemble, clean, and inspect Flywheel. Practice on flywheel facing. Practice to remove the timing belt and adjust the tension.  |
| 8 | 2 | 1,4   | Fuel supply system in SI engine - Types, Layout, Working of Gravity feed system and Pump Feed system. Carburetor- Function, Types, Construction and working of Simple carburetor. Fuel Pump- Function, Types, Construction and working of | Servicing of two wheeler carburettor.  Disassemble, clean, and inspect the fuel pump.  Practice on Replacement of fuel filter.   |

|    |   |         | Mechanical pump.   |   |
|----|---|---------|--|---|
| 9  | 2 | 1,4     | Fuel supply system in CI engine-<br>Types, Layout of Conventional<br>fuel feed system.<br>Fuel injection Pump- Function,<br>Types, Construction and working<br>of Inline FIP.  | Practice on FIP servicing. Conduct the FIP Calibration.   |
| 10 | 2 | 1,4     | Governor - Function, Types, Construction and working of centrifugal governor. Fuel Injectors - Function, Types, Construction and working of multi hole type Fuel injector. Fuel filter - Function, Types, Construction and working of diesel fuel filter and Water separator.                    | Conduct the Fuel injector servicing and testing. Practice of replacing the Fuel filter.   |
| 11 | 2 | 1,4     | Air filter - Function, Types, Construction. Intake Manifolds - Function, Types, Construction, Material. Exhaust manifold - Function, Types, Construction, Material. Mufflers - Function, Types, Construction of Baffle type muffler.   | Practice of Cleaning air filter. Practice of Cleaning the exhaust manifold and intake manifold.   |
| 12 | 3 | 1,2,4   | Cooling system –Function, Requirements, types. Construction and working of Water-cooling system and Air- cooling system. Comparison between Water cooling and Air- cooling system. Construction and working of Radiator, water pump and wax type thermostat valve. Coolant- types, requirements. | Perform the Servicing of the Radiator. Perform the Servicing of water pump. Practice the reverse flush of cooling system. Inspect and check for proper working of thermostat valve. |
| 13 | 4 | 1,2,4,5 | Lubrication system – Types, Function, Requirement. Construction and Working of Pump lubrication and Splash Lubrication. Lubricants- Types, SAE ratings of lubricants. Oil filter- Function, Types, Construction and working of Oil filters.  | Practice on Checking and refilling of the engine oil. Practice on Replace the Oil filter. Perform the servicing of the Oil Pump. Practice on safe disposal of used oil and filters. |

#### 9. Suggestive Activities for Tutorials:

The List is an Example and not inclusive of all possible activities of the course. Student and Faculty are encouraged to choose activities that are relevant to the topic

| Sl.No. | Suggestive Activities for Tutorials   |
|--------|---|
| 01     | Visit nearby service stations/garages and make report of Engine components, materials and gaskets used along with photographs.            |
| 02     | Visit nearby garage/service station and collect information on different types of valve mechanism and materials.                          |
| 03     | Collect different types of piston head, piston ring types and materials.  |
| 04     | Visit nearby garage/service station and collect information on specification of components of different automobile fuel feed systems.     |
| 05     | Visit nearby garage/service station and collect information on specification of components of different automobile cooling system systems |
| 06     | Visit nearby garage/service station and collect information on specification of components of different automobile lubrication systems    |

- **1.Rationale:** The IC engines are still in active use around the world and many automotive companies are considering active developments of IC Engines. Hence it is important for the student to learn basics of thermodynamics, fuel combustion and engine testing process.
- 2. **Course Outcomes: At** the end of the Course, the student will be able to:

| CO-01 | Demonstrate the basic thermodynamic concepts and gas laws using experiments and simulations.                         |
|-------|--|
| CO-02 | Demonstrate the concepts of heat transfer, thermodynamic process and cycles using simple experiments or simulations. |
| CO-03 | Illustrate the complete concepts of normal and abnormal combustion in IC Engines.                                    |
| CO-04 | Perform different performance tests of IC engines as per standard procedure.   |

#### 3. Course Content

| WEEK | CO | PO    | Theory  | Practice   |
|------|----|-------|---|--|
| 1    | 1  | 1,3,4 | Fundamentals of thermodynamics Definition- System, boundary and surrounding. Thermodynamic systems – closed, open and isolated systems with examples.   | Illustration of system and surrounding using simple experiments/ Virtual simulations.  Illustration of Thermodynamic |
|      |    |       | Pure substance, Thermodynamic equilibrium.  | equilibrium using simple experiments/ Virtual simulations.   |
| 2    | 1  | 1,3,4 | Thermodynamic state, Process, Cycle. Properties of system- Intensive and Extensive properties with examples. Definitions for properties like pressure (p), Volume (v), Temperature (T), Enthalpy (H), Internal energy (U) with the units. Specific heat at constant pressure (Cp), specific heat at constant volume (Cv) and their units. | Demonstrate the different properties of gas by simple experiments or virtual simulations.                            |
| 3    | 1  | 1,2,4 | Definitions for work, Standard atmospheric conditions-NTP-STP.  | Demonstrate the Laws of thermodynamics using simple  |

|    | ı  | I     | T Cd 1 ' 77 d 1                           |                                    |
|----|----|-------|---|------------------------------------|
|    |    |       | Laws of thermodynamics: Zeroth law,       | experiments or virtual             |
|    |    |       | first law, second law- Clausius           | simulations.                       |
|    | -1 | 101   | statement, Kelvin-Planck statement.       | D ( ( 1 D 1 1                      |
|    | 1  | 1,2,4 | Definition of Perfect gas.                | Demonstrate the Boyles law         |
|    |    |       | Boyle's law, Charle's Law, Gay            | using an online simulation.        |
| 4  |    |       | Loussac's law, Avogadro's law and         | Demonstrate the Charle's law       |
| 4  |    |       | Joule's law with expressions.             | using an online simulation.        |
|    |    |       |   | Demonstrate the Gay-Lussac         |
|    |    |       |   | law using an online simulation     |
|    |    |       |   |                                    |
|    | 2  | 1,2,4 | Derive the Characteristic gas equation,   | Demonstrate the modes of heat      |
|    |    |       | universal gas equation, universal gas     | transfer using simple              |
|    |    |       | constant.                                 | experiment or virtual lab/         |
| 5  |    |       | Relationship between two specific         | Simulation.                        |
|    |    |       | heats, Characteristic gas constant.       | Demonstrate the factors            |
|    |    |       | Heat Transfer- Definition, Modes of       | affecting heat transfer using      |
|    |    |       | heat transfer with examples, Factors      | simple experiments or              |
|    |    |       | affecting heat transfer.                  | Simulations.                       |
|    | 2  | 1,2,4 | Thermodynamic Process- PVT                | Demonstrate the work done,         |
|    |    |       | relations -work done, heat transfer,      | change in entropy and enthalpy     |
|    |    |       | change in internal energy, change         | of a process using online          |
| 6  |    |       | in enthalpy and entropy for               | simulations.                       |
|    |    |       | constant volume, Pressure, temperature,   | Conduct the experiment to study    |
|    |    |       | entropy. Simple problems.                 | the behaviour of different         |
|    |    |       |   | process using virtual lab.         |
|    | 2  | 1,2,4 | Air standard Cycles- definitions and      | Conduct the experiment to study    |
|    |    | , ,   | types, assumptions made in air standard   | the behaviour of Carnot Cycle      |
|    |    |       | cycles.                                   | using computer simulations.        |
| 7  |    |       | Description - P.V. and T-S diagrams of    | Conduct the experiment to study    |
|    |    |       | Carnot cycle, Otto cycle, diesel cycle    | the behaviour of Otto Cycle        |
|    |    |       | Air standard efficiency for Carnot        | using computer simulations.        |
|    |    |       | Cycle.                                    |                                    |
|    | 3  | 1,2   | Combustion in SI engine - Stages of       | Identify different design features |
|    |    |       | combustion with pressure crank angle      | of SI engine affecting delay       |
|    |    |       | diagram, ignition lag-concept, variables  | period and knocking.               |
| 8  |    |       | affecting ignition lag, abnormal          | Recreate the knocking in SI        |
|    |    |       | combustion-types-preignition-concept,     | engine by changing engine          |
|    |    |       | effects, detonation- definition, process, | parameters.                        |
|    |    |       | effects, controlling methods.             |                                    |
|    | 3  | 1,4   | Combustion in CI engine: Stages of        | Practice to draw the Valve         |
|    |    | _,.   | combustion with pressure crank angle      | timing diagram for 4 stroke        |
|    |    |       | diagram, ignition delay -variables        | engines.                           |
| 9  |    |       | affecting delay period, knocking-         | Identify different design features |
|    |    |       | definition, process, effects, controlling | of CI engine affecting delay       |
|    |    |       | method.                                   | period and knocking.               |
|    |    |       |   | period and knocking.               |
|    | 4  | 1 4   | En sin a Danfanga a sa                    | Demonstrate de 1960                |
|    | 4  | 1,4   | Engine Performance                        | Demonstrate the different types    |
|    |    |       | Dynamometer- Function, Types.             | of dynamometers.                   |
| 10 |    |       | Determination of IHP, BHP, FHP,           | Conduct the Performance test for   |
| 10 |    |       | mean effective pressure - IMEP,           | 4 stroke Petrol engine             |
|    |    |       | BMEP, Engine Torque, Mechanical           |                                    |
|    |    |       | Efficiency, Thermal Efficiency- Brake     |                                    |
| 11 | 1  | 1 1   | Thermal Efficiency.                       | Conduct the Deuferman - 1 - 1 C    |
| 11 | 4  | 1,4   | Volumetric Efficiency, Air Standard       | Conduct the Performance test for   |

|    |   |       | Efficiency.                            | 4 stroke Diesel engine.         |
|----|---|-------|--|---------------------------------|

The List is an Example and not inclusive of all possible activities of the course. Student and Faculty are encouraged to choose activities that are relevant to the topic

| Sl.,<br>No | Suggestive Activities for Tutorials   |  |  |  |  |  |
|------------|---|--|--|--|--|--|
| 01         | Create a physical or simulation model to simulate laws of thermodynamics.               |  |  |  |  |  |
| 02         | Create a report on applications of laws of thermodynamics in engineering.               |  |  |  |  |  |
| 03         | Create a physical or simulation model to demonstrate the laws of thermodynamics.        |  |  |  |  |  |
| 04         | Prepare a report on applications of gas laws in engineering                             |  |  |  |  |  |
| 05         | Create a simulation model to draw the different cycles.                                 |  |  |  |  |  |
| 06         | Prepare a report on various properties of different fuels required for good combustion. |  |  |  |  |  |
| 07         | Prepare a report on different combustion chambers used in SI engines.                   |  |  |  |  |  |
| 08         | Prepare a report on different combustion chambers used in CI engines.                   |  |  |  |  |  |
| 09         | Prepare reports on different dynamometers.  |  |  |  |  |  |

- **1. Rationale:** Automobile emissions are the major contributors to environmental pollution. Hence, the student should interpret the use of different emission-controlling techniques of conventional fuel IC Engines. The students should also assess various alternative fuels and other alternative power sources for automobiles.
- 2. **Course Outcomes:** At the end of the Course, the student will be able to:

| CO-01  | Perform the tests to find different properties of conventional and alternate fuels, and |  |  |
|--|---|--|--|
| CO-01  | appreciate their importance.  |  |  |
| CO-02 Perform service activities and troubleshooting of components of advanced fuel fe |   |  |  |
| CO-02  | system  |  |  |
| CO-03  | Perform service activities and troubleshooting of components of emission control        |  |  |
| CO-03  | systems   |  |  |
| CO-04  | Validate the use of alternate power sources and pollution norms.                        |  |  |
| 000.   | r P   |  |  |

#### 3. Course Content:

| Week | Veek CO PO |         | Theory   | Practice  |
|------|------------|---------|--|---|
| week |            |         | (4 Hours per week)   | (4 Hours per week)  |
| 1    | 1          | 1,4,5   | Fuels – Introduction, types.<br>Petroleum fuels – Concept, Types,<br>Refining process. Properties of<br>liquid and gaseous fuels. Merits<br>and demerits of liquid and gaseous<br>fuels. Octane and Cetane rating of<br>fuels. | Determination of flash point and fire point of different liquid fuels.  Determination of viscosity of petrol and Diesel fuel using a viscometer.            |
| 2    | 1          | 1,4,5,7 | Alternative fuels – Introduction, types. Methanol – Properties, merits, demerits, storage, emissions. Ethanol – Properties, merits, demerits, storage, emissions. Engine modifications required for alternative fuel.          | Determination of the Calorific value of methanol and ethanol using the bomb's calorimeter. Conduct the performance test using blends of ethanol and petrol. |
| 3    | 1          | 1,4,5   | Biodiesel – Introduction, properties, merits, demerits, storage, emissions. Biodiesel production processes.  | Determination of flash point, and fire point of biodiesel.  Conducting performance test using blends of biodiesel and diesel.                               |

|    |   | ,       |  |  |
|----|---|---------|--|--|
| 4  | 1 | 1,4,5   | Hydrogen – Introduction, production process -types - production using electrolysis of water, properties, merits, demerits, storage, emissions. Engine modifications to use hydrogen. Fuel cells- introduction, types - Construction and working of PEM type. | Conduct an experiment to produce hydrogen using the electrolysis process.  |
| 5  | 2 | 1,4,5   | CNG – Introduction, properties, merits, demerits, storage, emissions. Layout and working of CNG fuel feed system   | Practice the installation of CNG kit to the car, setting.  Practice on maintenance CNG kit.  |
| 6  | 2 | 1,4     | Multipoint fuel injection system-<br>layout, working, merits,<br>classification. Gasoline direct<br>injection system- Working, merits.<br>construction and working of<br>electronic petrol injector  | Identification of different components of multipoint fuel injection and gasoline direct injection system.  Practice removing and refitting different components of the fuel injection system.  Practice on Petrol injector cleaning and testing. |
| 7  | 2 | 1,4     | Electronic Common rail diesel injection system- layout, working. Electronic Unit injection system-layout, working. Construction and working of electronic common rail diesel injector and Unit injector.   | Identification of different components of electronic common rail diesel injection system and electronic unit injection system.  Practice on servicing of CRDI and UI injectors.  |
| 8  | 2 | 1,2,4,5 | Stratified engine -Need, types. Supercharging- Need, types. Turbocharging- Need, types. Construction and working of turbocharger. Boost control-need, types. working of waste gate method and Variable geometry method.                                      | Practice the Servicing of a supercharger. Practice the Servicing of a turbocharger. Practice the Troubleshooting of turbochargers.   |
| 9  | 3 | 1,4,5   | Pollutants from an automobile, Sources of pollutants in SI engine & CI engine. Mechanism of formation of nitrogen oxide, particulate, carbon monoxide and unburnt hydrocarbon in SI and CI engine.   | Practice the measurement of HC, CO, CO2, and O2 using an exhaust gas analyzer.  Practice the measurement of diesel engine emissions using the smoke meter.   |
| 10 | 3 | 1,2,4,5 | Crankcase ventilation system- need, layout and working. Exhaust gas recirculation- need, layout and working. Catalytic converters -need, types. Construction and working of 3-   | Practice on Servicing of PCV and EGR system. Practice removing and refitting the catalytic converter.  |

|    |   |       | way catalytic converter and exhaust manifold reactor. SCR and particulate filters of CI engines – Need, construction and working. Combustion chamber modifications to SI and CI Engines to control emissions.  | Practice the troubleshooting of particulate emission control system of diesel engines. Practice the troubleshooting of PCV and EGR systems.   |
|----|---|-------|--|---|
| 11 | 4 | 1,4,5 | Emission norms- need, different emission standards for different engines in India. Driving cycles- types. Bharath stage emission standards and norms. Comparison of Bharath stage with European standards.     | Prepare a report on the case study of implementing BS VI norms. Conduct the test for Emission and fuel consumption under different driving cycles.  |
| 12 | 4 | 1,5   | Pollution- Types - air pollution, water pollution, Noise pollution, soil pollution. Effects of pollution on living things and environment. Reasons and effects of Acid rain and global warming.                | Prepare a report on Case studies to control pollution, Soil quality, water, and air quality measurement.  |
| 13 | 4 | 1,4   | Hybrid vehicle-Need, types. Layout & working of Series hybrid and parallel hybrid. Comparison of series to parallel hybrid. ARAI- Formation, functions. Formulation of standards. Central Motor vehicle rules. | Identify the different components of a hybrid vehicle.  Demonstration of series and parallel hybrid vehicle working using demo models/test rigs.  Prepare a report on the case study of ARAI comprehensive certification and homologation services. |

### 9. Suggestive Activities:

The List is an Example and not inclusive of all possible activities of the course. Students and Faculty are encouraged to choose activities that are relevant to the topic. Two activities, each for 50 marks should be evaluated with proper rubrics.

| SN | Suggested Activity  |  |  |  |
|----|---|--|--|--|
| 1  | Study the benefits of different alternative fuels and submit the report on the best alternative fuel for transit buses with proper justification. |  |  |  |
| 2  | List the properties of hydrogen and prepare a presentation on hydrogen fuel cell vehicles.  |  |  |  |
| 3  | Take a survey on the effects of vehicular pollution on human health and present the effects of pollution on human health.                         |  |  |  |
| 4  | Refer to any one journal paper and present the mechanism of pollutant formation in an IC engine.  |  |  |  |
| 5  | Prepare a report on hydrogen internal combustion engines.   |  |  |  |
| 6  | Study and document the effect of the Diesel particulate trap on the efficiency of the engine and submit it as an assignment.                      |  |  |  |
| 7  | Document the impact of BS VI (Phase-2) norms on vehicle pollution as an assignment.   |  |  |  |

| 8  | Collect information on different CNG vehicle in India and prepare a report.                        |
|----|--|
| 9  | Prepare a report Comparing Electric Vehicles, Hybrid Vehicles and Conventional IC engine Vehicles. |
| 10 | Collect the emissions data of different vehicle under different conditions and prepare a report.   |

## 10. Rubrics for Assessment of Activity (Qualitative Assessment)

| Sl. | Dimension                          | Beginner            | Intermediate               | Good  | Advanced  | Expert  | Students |

# **Government of Karnataka**DEPARTMENT OF TECHNICAL EDUCATION

| Program                | Automobile Engineering    | Semester             | IV                        |
|------------------------|---------------------------|----------------------|---------------------------|
| Course Name            | Hydraulics and pneumatics | Type of Course       | Integrated                |
| Course Code            | 25AT41I                   | <b>Contact Hours</b> | 104 Hrs/sem<br>8 Hrs/week |
| <b>Teaching Scheme</b> | L: T:P 4:0:4              | Credits              | 6                         |
| CIE Marks              | 50                        | SEE Marks            | 50 (Theory)               |

- **1. Rationale:** Many hydraulic and pneumatic systems are used in the control mechanisms of automobiles and machines. Hence it is important to know the concepts of various Hydraulic and Pneumatic systems to troubleshoot the existing systems and to design the new control systems.
- 2. **Course Outcomes:** At the end of the Course, the student will be able to:

| CO-01 | Identify the applications of hydraulic and Pneumatic control systems in automobiles. |
|-------|--|
| CO-02 | Perform the various testing and maintenance activities of Hydraulic systems.         |
| CO-03 | Recreate the hydraulic and Pneumatic circuits used in Automobiles.                   |
| CO-04 | Perform the various testing and maintenance activities of Pneumatic systems          |

### 3. Course Content:

| WEEK | CO | PO      | Theory  | Practice   |
|------|----|---------|---|--|
| 1    | 1  | 1,4     | Fluid power engineering – Concept, importance – application, fluid – definition, properties, Bernoulli's equation- Principle. Pascal's law with illustrations, Power transmission methods, fluid systemtypes, block diagrams of hydraulics & pneumatic systems. | Identification of different components of hydraulic and pneumatic circuits.  Demonstration of Bernoulli's Principle.  Demonstration of Pascal's law. |
| 2    | 1  | 1,2,3,5 | Valves – functions, types, hydraulic spool valves-types, Pressure control valve, pressure relief valve, counter balance valve, pressure reducing valve, direction control valves – 2/2, 3/2, 4/2, 5/2, 5/3  | Identification of features of pressure relief valve and Direction control valves.  Servicing of different types of valves as per standard procedure. |

|    |   |         |   | Practice the Safe disposal of used   |
|----|---|---------|---|--|
|    |   |         |   | components and materials.  |
| 3  | 1 | 1,4     | Methods of actuation of valves-<br>Types, flow control valve- Types,<br>Working of Needle valve, Ball valve<br>and butterfly valve. Working of<br>non-return/check valves and pilot<br>operated sequence valve.           | Demonstration of different actuation methods of valves using demo kits/simulations.  Demonstration of functions of non-return valve, flow control valve using demo kits/simulations.             |
| 4  | 2 | 1,2,3,4 | Actuators- functions, types, cylinder type-ram type and piston type-single acting cylinder, double acting actuator. Rotary actuators – gear, vane, piston type.   | Design relevant circuit to demonstrate working of single acting and double acting actuator.  Trouble shooting of single acting and double acting actuators.                                      |
| 5  | 2 | 1,2,4   | Pumps- necessity, classification, construction and working of – external gear, lobe, vane pumps, piston- radial pumps.  | Servicing and testing of gear, lobe, and vane pump.  |
| 6  | 3 | 1,3,4   | Hydraulic circuits, hydraulic symbols, ports – markings and positions. Design of Hydraulic circuits: meter in circuits, meter out circuits, bleed off circuits, accumulator circuits.                                     | Design the different types of hydraulic circuits using demo kits/ Simulations  |
| 7  | 3 | 1,2,3,4 | Regenerative circuits, Pressure reducing circuits. Hydraulic circuits of systems used in automobiles-Hydraulic brake, Power steering.   | Identify the faults for a given hydraulic system, analyze the causes and carry out the preventive measures.  Create hydraulic brake circuit and power steering using relevant hydraulic symbols. |
| 8  | 4 | 1,2,4   | Pneumatics: Definition, importance, areas of application, properties of air, humidity.  Air compressor- necessity, types, Working of reciprocating, diaphragm and vane compressor. Requirements of multistage compressor. | Service and test the different types of air compressor.  |
| 9  | 4 | 1       | Reservoirs: Functions, air filter-<br>screen type, bowl type. Pressure<br>regulators- diaphragm type,<br>lubricator, FRL unit.  | Servicing of different types of air filter.  Maintenance of FRL unit.  |
| 10 | 4 | 1,2,4   | Pneumatic actuators: Necessity, Types. Air suspension- layout and working,  | Service and testing of different pneumatic actuators.  Servicing of different  |

|    |   |         | Merits & Demerits. Working of Piston type and bellow type air Springs,  Pneumatic symbols, basic  | components of air suspension.  Troubleshooting of air suspension system.  Create pneumatic circuits of   |
|----|---|---------|---|--|
| 11 | 3 | 1,3     | pneumatic circuit- control of double acting cylinder using 4/2 DCV- pilot controlled double acting cylinder 4/2 DCV.  |  |
| 12 | 4 | 1,2     | Speed control circuit for double acting cylinder, semi-automatic material handling circuit, time delay circuit, pneumatic tool circuit. Air brake system- layout and working. Working of Air brake valve & brake chamber. Fail safe brake-Need, Layout, Working.                | Identification of different components of air brake system.  Servicing of brake valve and brake chamber.  Trouble shooting of air brake system.  |
| 13 | 3 | 1,2,3,5 | Maintenance of pneumatic systems- Purpose, common faults, preventive measures, and maintenance schedule.  Combination circuits: Advantages, Layout & Working of Hydropneumatic suspension, Merits & Demerits. Hydro elastic spring-Working. Air over hydraulic brakes- working. | Identify the faults of pneumatic system, analyze the causes and remedies.  Create hydro pneumatic suspension circuit and air over hydraulic brake circuit.  Appreciate the Safe disposal of used components and materials. |

### 10. Suggestive Activities for Tutorials:

The List is an Example and not inclusive of all possible activities of the course. Student and Faculty are encouraged to choose activities that are relevant to the topic

| Sl.No. | Suggestive Activities for Tutorials  |  |  |  |  |  |
|--------|--|--|--|--|--|--|
| 01     | Draw hydraulic circuits used in Automobile's, construction vehicles and garage equipment/machines. |  |  |  |  |  |
|        | Draw pneumatic circuits used in Automobile's, construction vehicles and garage                     |  |  |  |  |  |
| 02     | equipment/machines.  |  |  |  |  |  |
| 03     | Create different hydraulic circuits used in construction and agricultural vehicles.                |  |  |  |  |  |
| 04     | Prepare a report on different hydraulic circuits used in hydraulic excavator.                      |  |  |  |  |  |
| 05     | Prepare a report on hydraulic drive motor control used in road roller.                             |  |  |  |  |  |
| 06     | Create different pneumatic circuits used in automobile.  |  |  |  |  |  |

#### 1. Rationale:

The modern automobile systems are controlled by various sensor and actuators. Hence the students should be able to justify the use of different sensors and actuators adopted in advanced electrical and mechanical systems used in automobile. The students should perform service activities related to sensors and actuators used in advanced electrical and mechanical systems of automobile.

### 2. **Course Outcomes:** At the end of the Course, the student will be able to:

| CO-01 | Perform the testing and troubleshooting of different sensors and actuators.              |
|-------|--|
| CO-02 | Perform the troubleshooting activities of the advanced transmission and steering system. |
| CO-03 | Perform the troubleshooting activities of advanced safety and stability systems.         |
| CO-04 | Perform the troubleshooting activities of battery vehicle and their components.          |

### 3. Course Content:

| Week | СО | РО    | Theory<br>(4 Hours per week)  | Practice<br>(4 Hours per week)   |
|------|----|-------|---|--|
| 1    | 1  | 1,2,4 | Sensors-meaning-types. Actuators-meaning-types, electronic control systems-need- merits and demerits-types. – comparison. Microcontroller /ECM-need-layout of typical ECM-functions of each component of ECM. Working of ECM. Networking-concept, Multiplexing-concept, CAN- concept. | Identification of location of different ECMs used in automobile.  Practice on safely removal and reconnection of different connections to ECM.  Identification of different components and pin configurations of typical automobile ECM.  Identify ECM related problems, reasons and suggest remedies. |
| 2    | 1  | 1,2,4 | TDC/RPM sensors-function-types-<br>construction and working of Hall-<br>effect and electromagnetic type<br>types- circuit diagrams showing<br>connection of theses sensors to<br>ECM.   | Identification of TDC/RPM and temperature sensor location.  Practice on removal and refitting of TDC/RPM sensor and temperature sensor.  Practice on testing of TDC/RPM sensor   |

|   |   |       | Temperature sensor-functions - construction and working- circuit diagram showing connection of this sensor to ECM.  | and temperature sensor.  Identify TDC/RPM sensor and temperature sensor related problems, reasons and suggest remedies.   |
|---|---|-------|---|---|
| 3 | 1 | 1,2,4 | Manifold pressure sensor-need-types-construction and working of MAP and MAF sensor-circuit diagrams showing connection of theses sensors to ECM.  Knock sensor-need-construction and working-circuit diagram showing the connection to ECM. | Identification of location of MAP, MAF and knock sensor.  Practice on removal and refitting of MAP, MAF and knock sensor.  Practice on testing of these sensor.  Identify MAP/MAF sensor and Knock sensor related problems, reasons and suggest remedies.           |
| 4 | 1 | 1,2,4 | Throttle position sensor-functions-construction working-circuit diagram showing the connection to ECM.  Exhaust gas oxygen sensor-functions-construction and working-circuit diagram showing connection to ECM.                             | Identification of location of TPS, and EGO sensor.  Practice on removal and refitting of TPS and EGO sensor.  Practice on testing of these sensor.  Identify TPS sensor and EGO sensor related problems, reasons and suggest remedies.                              |
| 5 | 1 | 1,2,4 | Ride height sensor-potentiometer type and LVDT type-functions-construction and working-circuit diagram showing connection of these sensor to ECM.  Rain sensor-function-types-construction and working of infrared type rain sensor.        | Identification of location of ride height, and rain sensor.  Practice on removal and refitting of ride height and rain sensor.  Practice on testing of these sensor.  Identify ride height sensor and rain sensor related problems, reasons and suggest remedies.   |
| 6 | 1 | 1,2,4 | Impact sensor-functions-types-construction and working of magnetic bias and rolamite sensor.  On/off solenoid-functions-construction and working on/off solenoid.  Relay-functions-construction and working of relay.                       | Identification of location of impact sensor.  Practice on removal and refitting of impact sensor.  Practice on testing of impact sensor.  Identify ride impact sensor related problems, reasons and suggest remedies.  Practice on servicing of solenoid and relay. |
| 7 | 1 | 1,4   | Pulse width modulation-concept- need-Duty cycle-concept- construction and working of proportional solenoid.  Stepper motor-construction and working-applications.  Servomotor-construction and working.                                     | Identify the location of proportional solenoid.  Practice on controlling a motor/brightness of bulb using pulse width modulation.  Practice on servicing and testing proportional solenoid.  Practice on servicing and testing of stepper and servo motors.         |

|    |   | ı     |  | I   |
|----|---|-------|--|---|
| 8  | 2 | 1,2,4 | Automated manual transmission-layout-working-merits. Continuously variable transmission-construction and working-merits and demerits. Torque converter-working-merits-demerits, Torque converter lock up-types-construction and working of centrifugal and double clutch type.         | Removal and refitting of components of continuously variable transmission. Removal and refitting of automated manual transmission components. Trouble shooting of Continuously variable and automated manual transmission.  |
| 9  | 2 | 1,2,4 | Hydraulic automatic transmission-working. dual clutch transmission-working. Viscous coupling-working limited slip differential-need-types-working of clutch type limited slip differential.  | Removing and refitting different components of hydraulic automatic transmission.  Removal and refitting of different components of limited slip differential.  Trouble shooting of hydraulic automatic transmission.  |
| 10 | 2 | 1,2,4 | Four-wheel drive system-concept-<br>merits-demerits-types-layout of<br>part-time four-wheel drive system<br>and four-wheel drive system using<br>viscous coupling.<br>Electric power steering-types-<br>construction and working of<br>column mounted type electric<br>power steering. | Identification of parts of four drive wheel system.  Practice on servicing of transfer gear box.  Practice on servicing of electric power steering.  Trouble shooting of electric power steering.   |
| 11 | 3 | 1,2,4 | Antilock brake system-need-layout-hydraulic modulator-construction working.  Air bag system-need-layout-working. Collison avoidance system-need-layout-working.  | Identification of antilock brake system components.  Servicing of different components of antilock brake system.  Identification of different components of air bag system.  Trouble shooting of antilock brake system.   |
| 12 | 3 | 1,4   | Computerised instrumentation system-layout-merits. electronic stability control system-need-layout. Traction control system-need-layout.  Autonomous vehicle/driver less vehicle-concept-layout-merits-demerits.   | Removal and refitting of components of instrumentation system.  Identification of components of electronic stability, traction control system and autonomous vehicle.   |
| 13 | 4 | 1,2,4 | Electric vehicle-layout-working, merits-demerits, battery management system, battery pack construction, brushless DC motor working, AC synchronous motor working-speed control.  Regenerative braking-layout-working using both BLDC and AC synchronous motors-merits and demerits.    | Identification of different components of battery vehicles.  Safe removal of components of battery vehicle and refitting.  Servicing of BLDC and A.C synchronous motors.  Demonstration of electric vehicle using demo model/ test rigs.  Trouble shooting of electric vehicle. |

### 9. Suggestive Activities:

The List is only shared as an Example and not inclusive of all possible activities of the course. Student and Faculty are encouraged to choose activities that are relevant to the topic and on the availability of such resources at their institution. **Two activities**, each for **50 marks** should be evaluated with proper rubrics.

| Sl. No. | Suggestive Activities for Tutorials  |
|---------|--|
| 01      | Open an ECU from a vehicle and reconnect as per the pin configuration.                                 |
| 02      | Study and give a presentation on CAN.  |
| 03      | Make a list of various sensors used in a vehicle with their position and submit it as an assignment.   |
| 04      | Make a list of various actuators used in a vehicle with their position and submit it as an assignment. |
| 05      | Study and present on parking assist system.  |
| 06      | Visit nearby workshop and know the working of AMT.   |
| 07      | Study and present on construction and working of electrical power steering.                            |
| 08      | Prepare a report on working of different types of ABS system.  |
| 09      | Prepare a presentation on working principle and actuation of air bags.                                 |

| 10 | Prepare a simple working model of regenerative braking showing the working principle it.   |
|----|--|
| 11 | Make a group of 5 and visit nearest showroom discuss on the topic battery life, cost of replacement, recycling of batteries in EV and write a report on the observed data. |
| 12 | Visit an electric vehicle service station and identify the location of various 2-wheeler and 4-wheeler electric components.  |
| 13 | Dismantle DC and BLDC motors, know the physical differences and working principle and prepare a report on it.  |

## 10. Rubrics for Assessment of Activity (Qualitative Assessment)

| Program                | Automobile Engineering                 | Semester             | IV                      |
|------------------------|--|----------------------|-------------------------|
| Course Name            | Vehicle body engineering and dynamics. | Type of Course       | Integrated              |
| Course Code            | 25AT43I                                | <b>Contact Hours</b> | 91hrs/sem<br>7 hrs/week |
| <b>Teaching Scheme</b> | L: T:P 3:0:4                           | Credits              | 5                       |
| CIE Marks              | 50                                     | SEE Marks            | 50 (Practice)           |

- **1. Rationale:** The safety, ergonomics and efficiency of the vehicle are important parameters in design of vehicle body. Hence the student should be able to appreciate concepts of safety, ergonomics and efficiency of car body. The student should perform various repair activities on vehicle body.
- **2. Course Outcomes: At** the end of the Course, the student will be able to:

| CO-01 | Perform repair activities on vehicle body and paint with appropriate equipment and procedure.    |
|-------|--|
| CO-02 | Perform service activities of vehicle safety and comfort systems,                                |
| CO-03 | Calculate amount of power required for propulsion and vehicle performance parameters under       |
|       | different operating conditions of vehicle.   |
| CO-04 | Calculate different vehicle braking performance parameters under different operating conditions. |
|       |  |

### 3. Course Content

| WEEK | CO | PO  | Theory  | Practice   |  |
|------|----|-----|---|--|--|
| 1    | 1  | 1,4 | Car body-functions, requirements, classification based on body style, classification based on engine and drive wheel position-layout of each type-merits and demerits of each type. | Identification of different types of body style.  Identification of different chassis components.  Identification of different components of car body parts. |  |
| 2    | 1  | 1,4 | Parts of body-construction of each part-functions of each partmaterials used. Visibility-   | bumper, front and rear bonnet, front left  |  |

|   | 1 | 1     |  |   |  |
|---|---|-------|--|---|--|
|   |   |       | concept-methods to improve visibility. Sources of noise and vibrations-methods to reduce noise and vibrations.   |   |  |
| 3 | 1 | 1,4   | Car body construction-types-<br>process of unitary body<br>construction.  Welding-types, arc welding-<br>types-components of arc<br>welding-arc welding process. Gas welding-components of gas<br>welding process-gas welding<br>process-types of flame and<br>their applications. | Practice on creating but, lap and T-joints using arc welding process.  Practice on creating a tray and a funnel using sheet metal and join edges using gas welding process.  Practice on producing three types of flames. |  |
| 4 | 1 | 1,4,5 | Car painting-objectives-<br>elements of paint-functions of<br>each element of paint, painting<br>methods-types-air spray<br>painting, air less spray<br>painting, electrostatic painting.  | Practice on removing of dent from panels. Practice on preparing body panels for painting. Practice on painting the body panels using any method of painting.  |  |
| 5 | 2 | 1,4,5 | Passenger Safety-passive and active safety systems-crumple jones-passenger cage-impact energy flow, seat belt-types-working of three-point seat belt, collapsible steering-types-construction-telescopic and mesh type, pedestrian safety-methods to improve pedestrian safety.    | Identification of passive safety systems of car. Removing and refitting of seat belts. Remove and refit steering columns from vehicle.  |  |
| 6 | 2 | 1,4   | Ergonomics -concept-methods to improve ergonomics, Types of seats, Bucket seat construction and position adjustments, steering column tilt and reach adjustment mechanism, Doors-types-door glass operating mechanism-types-manual.  | Servicing of manual door glass operating mechanism.   |  |
| 7 | 2 | 1,4   | Electrical front door glass operating mechanism, central locking mechanism, remote control-concept-layout.  Wind shield glass-need-types-construction of laminated glass, defrosting-concept-working.  | Servicing of electrical door glass operating mechanism. Servicing of central locking system. Replacement of wind shield glass.  |  |

| 8  | 2 | 1,4,5   | Car air conditioning-need-layout-working. Crash testing-need-types-procedure to conduct crash testing as per Bharat NCAP. Meaning of ratings as per the NCAP.  | Trouble shooting of A.C system. Removing and refilling of refrigerant.   |
|----|---|---------|--|--|
| 9  | 3 | 1,2,3   | Aerodynamic forces acting on car body, methods to reduce car aerodynamic drag. Different resistances to car motion. Air resistance-rolling resistance, gradient resistance, power required for propulsion.   | Find air resistance, rolling resistance, gradient resistance and power required for propulsion for different vehicle speed, road surface, and gradients. (Solve simple problems)   |
| 10 | 3 | 1,2,3   | Relation between engine speed<br>and vehicle speed, traction,<br>tractive effort, maximum<br>acceleration, gradability, and<br>draw bar pull, equivalent<br>weight, weight distribution for<br>car on slope. | Find vehicle speed, tractive effort, acceleration, gradability, and draw bar pull under different engine speed gear ratios and vehicle weight. (Solve simple problems)   |
| 11 | 3 | 1,2,3   | Maximum acceleration, tractive effort and road reactions under different drive conditions.   | Calculation of maximum acceleration, tractive effort and road reactions under different drive conditions, different road and vehicle dimensions. (solve simple problems)   |
| 12 | 4 | 1,2,3,4 | Breaking efficiency, stopping distance, Theory of internal shoe brakes, mean lining pressure and heat generation, Trailing and leading shoesconcept-applications   | Calculation of braking torque, mean lining pressure and heat generation under different brake drum dimensions, braking force, material and type of shoe. (solve simple problems)  Practice on finding braking distance and braking efficiency on different conditions of road and vehicle. |
| 13 | 4 | 1,2,3   | Road reactions and deceleration of vehicle on moving on slope with only front brakes applied, rear brakes applied and all brakes applied.  | Find road reactions and deceleration of vehicle under different road conditions and with different dimensions of vehicle. (solve simple problems)  |

### 7. CIE Theory Test model question paper

| Program     | Automobile Eng              | Semester - | IV     |       |    |
|-------------|-----------------------------|------------|--------|-------|----|
| Course Name | Vehicle body engineering an | Test       | I      |       |    |
| Course Code | 25AT43I                     | Duration   | 90 min | Marks | 50 |

#### Name of the Course Coordinator:

**Note:** Answer any one full question from each section. Each full question carries equal marks.

| Q. No | Questions   | Cognitive<br>Level | Course<br>Outcome | Marks |    |
|-------|---|--------------------|-------------------|-------|----|
|       | Section - 1   |                    |                   |       | I  |
|       | a) Write the classification of car bodies.                | 10M                | L2                | 1     |    |
| 1     | b) List the methods to improve visibility.                | 05M                | L2                |       |    |
| 1     | c) Illustrate the arc welding process.                    | L2                 |                   | 25    |    |
|       | a) List the requirements of car body.                     | 05M                | L2                | 1     |    |
| 2     | b) Explain the front engine and front wheel drive system  | 10M                | L2                |       |    |
|       | c) Illustrate gas welding process.                        | 10M                | L2                |       |    |
|       | Section - 2   |                    |                   |       |    |
|       | a) List the functions of car paint.                       | 05M                | L3                | 1     |    |
| 2     | b) Explain the process of air spray painting.             | 10M                |                   |       |    |
| 3     | c) Explain the different parts of car body with a sketch. | 10M                |                   |       |    |
|       | a) List sources of noise and vibration from vehicle.      | 05M                | L3                | 1     | 25 |
|       | b) Explain the functions of each component of paint.      | 10M                |                   |       |    |
| 4     | c) Explain the process electrostatic car painting.        | 10M                |                   |       |    |

Note for the Course coordinator: Each question may have one, two or three subdivisions. Optional questions in each section carry the same weightage of marks, cognitive level and course outcomes.

## 9. Suggestive Activities for Tutorials:

The List is an Example and not inclusive of all possible activities of the course. Students and Faculty are encouraged to choose activities that are relevant to the topic. Two activities, each for 50 marks should be evaluated with proper rubrics.

| Sl.No. | Suggestive Activities for Tutorials  |
|--------|--|
| 01     | Collect information on different vehicle bodies with photographs and specifications. |
|        | Collect information on different advanced paints and painting process.               |
| 02     |  |
| 03     | Collect information on different tools and equipment used in body repair shops.      |
| 04     | Collect information on different paint components used in car body painting shops.   |
| 05     | Collect information on different advanced body repair process                        |
| 06     | Collect information on different advanced metal joining process.                     |
| 07     | Collect information on advance safety and comfort systems of vehicle.                |

10. Rubrics for Assessment of Activity (Qualitative Assessment)

| S1.                            | Dimension                          | Beginner            | Intermediate               | Good  | Advanced  | Expert  | Students |

- **1. Rationale:** Machine design, parametric modelling, geometric tolerance and dimensioning are important part of modern designing process. The student should learn the concepts of machine design and gain skills in parametric modelling.
- 2. **Course Outcomes:** At the end of the Course, the student will be able to:

| CO-01 | Perform experiments and calculations to find different material and shape related parameters    |
|-------|---|
|       | required to design machine elements.  |
| CO-02 | Apply appropriate geometric tolerance and dimensioning symbols to machine drawings using free   |
|       | and open-source software.   |
| CO-03 | Design and create solid part models and assemblies of different machine elements using standard |
|       | procedures.   |
| CO-04 | Design and create solid part models and assemblies of different Automotive Engine components    |
|       | using standard procedures.  |

#### 3. Course Content

| WEEK | CO | PO | Theory   | Practice   |
|------|----|----|--|--|
| 1    | 1  |    | Machine design-introduction, types, process. Force, Torque, couple, loadstypes. Simple stress and strains — Tensile stress and compressive stress. Hooke's law, Young's modulus. Shear stress and strain, Shear modulus or modulus of rigidity. Stress-strain diagram. Working stress, Factor of safety-definition, purpose. | Conduct the tensile test on mild steel using UTM and plot the stress-strain diagram. Conduct the Compression test on Cast iron using UTM and plot the stress-strain diagram. |
|      | 1  |    | Linear and Lateral Strain, Poisson's Ratio. Volumetric strain, Bulk modulus.   | Practice to find the Centre of gravity and moment of inertia of L  |
| 2    |    |    | Resilience. Centre of gravity & moment of Inertia –  | section, I Section and Box section using analytical method and free  |

|    |   | concept, Importance.   | and open-source   |
|----|---|--|---|
|    |   | сопсерт, ипроглансе.   | software/simulation.  |
|    | 2 | Limits-Need for limit system. Fit-   | Practice to insert different fit,                                   |
|    |   | Types of Fit – Clearance fit,  | tolerance, precision, and limit                                     |
|    |   | interference fit, transition fit and their                                       | symbols using free and open-  |
|    |   | designation.   | source software.  |
| 3  |   | Allowance, Tolerance – System of   | Identify the different types of fit                                 |
|    |   | Tolerance-shaft based and hole-based   | and tolerances in automobile  |

### 10. Suggestive Activities for Tutorials:

The List is an Example and not inclusive of all possible activities of the course. Students and Faculty are encouraged to choose activities that are relevant to the topic. Two activities, each for 50 marks should be evaluated with proper rubrics.

| Sl.No. | Suggestive Activities for Tutorials  |
|--------|--|
| 01     | Collect stress-strain diagrams of different engineering materials, compare and prepare a report.   |
| 02     | Collect various properties of different materials, compare and prepare a report.   |
| 03     | Find the center of gravity and moment of inertia of different sections manually and using software.  |
| 04     | Collect different types of fasteners, measure the dimensions and create solid models using parametric software.                              |
| 05     | Collect information on different types of solid modeling software and crate comparative analysis report.                                     |
| 06     | Collect any one type of coupling, automotive component measures its dimension and create a solid model using any one of parametric software. |

### 11.Rubrics for Assessment of Activity (Qualitative Assessment)

- **9. Rationale:** Studying farm tractors and equipment as a subject is based on the significant role that machinery plays in modern agriculture. Understanding this subject equips students, technicians, engineers, and farmers with the knowledge required to optimize farm operations, improve productivity, and contribute to the advancement of agricultural practices.
  - 10. **Course Outcomes:** At the end of the Course, the student will be able to:

| CO-01 | Classify farm machinery based on their application   |
|-------|--|
| CO-02 | Perform the servicing of the tractor and its components.                                       |
| CO-03 | Properly use and service agriculture equipment.  |
| CO-04 | Adopt methods to conserve the soil as well as effective utilization of agriculture implements. |

#### 11. Course Content:

| WEEK | CO | PO    | Theory  | Practice  |
|------|----|-------|---|---|
| 1    | 1  | 1,6,7 | Farm Mechanization: Introduction, Objectives of farm mechanization, Scope of farm mechanization, Benefits of farm mechanization. Tractors manufacturers of India with their models and plant locations. | Prepare a report on merits and demerits of farm mechanization by conducting a field visit.  |
| 2    | 1  | 1,6,7 | Classification of tractors based on their applications. Classification of Farm equipment based on their application. Farm equipment manufacturers in India with their machinery and plant locations.    | Visit a tractor showroom and prepare a report on activities performed. Visit a farm equipment show room and prepare a report.  Identification of different tractors and |

|    |   |       |   | their parts.  |
|----|---|-------|---|---|
| 3  | 2 | 1,2,4 | Tractors gear box-types-construction and working of synchromesh gear box. Types of final drives-single, double reduction and planetary gears. Power take off shaft-need-types-construction and working of each type.  | Servicing of tractor gear box, troubleshooting chart.  Servicing of tractor final drive and PTO drive.  |
| 4  | 2 | 1,2,4 | Steering in tractors- Introduction - construction and working, types- Power steering, Articulated Steering, Differential steering. Hydraulic system in tractors-draft and depth control mechanism.  | Identification of parts of hydraulic draft and depth control system and servicing. Servicing of hydraulic power steering.   |
| 5  | 2 | 1,2,4 | Brakes-types-split pedal braking. Track width adjustment-need-types Ballasting of tyres-need-types Methods of crop production, Classification of farm machines.   | Servicing of braking system and Practice on changing front and rear track width adjustment. Visit nearest farm and identify method of crop production used and farm machinery used. |
| 6  | 2 | 1,2,4 | Tractor tyres and cage wheels- Specification of tyre, Cage Wheel- Necessity, Construction, application. Ballasting of tyre- Need, Method, application, and Advantages.  | Practice the process of ballasting of tyre. Practice the process of tyre replacement and cage wheel.  |
| 7  | 3 | 1,4   | Tillage-need-types-construction and working of Mould board plough, disc plough. Harrow plough-types-Single acting —double acting —offset harrow plough, cultivator, rotary plough.  | Identification of tillage equipment, Practice the process of attachment of implement to the tractor with necessary adjustments.   |
| 8  | 3 | 1,4   | Importance of Fertilizer application, Fertilizer drill machine, fertilizer spreader, methods of fertilizer application. Broadcasting, placement, foliar, fertigation, aerial application Pesticide sprayer- Sprayer nozzle, Pumps for spraying Sprayers-need- types-construction and working of boom sprayer. | Identification of parts of sprayers.  Practice on use of different types of agricultural sprayers.  |
| 9  | 3 | 1,4   | Harvesting-meaning-Functions of harvesting combine. Essential parts of harvesting combine. Functions of Power threshers, types of power threshers, construction and working of thresher, construction and working of reel, cutter bar.  | Practice harvesting process using harvesting combine machine.  Practice the process of using thresher.  |
| 10 | 3 | 1,4   | Uses of drones in agriculture-  | Practice on operation of drone.   |

|    |   |     | Field Monitoring and Crop Surveillance, Irrigation Management, Planting and Seeding, Pest and Disease Detection, Crop Spraying and Fertilization, Soil Health and Quality Assessment, Livestock Monitoring. Safety precautions to be followed and equipment to be used while spraying pesticides.   | Practice on Crop Spraying and Fertilization by using drone.   |
|----|---|-----|---|---|
| 11 | 4 | 1,5 | Soil erosion - causes, types- water erosion - a) sheet erosion b) rill erosion c) Gully erosion, wind erosion and Human Induced Erosion (Accelerated Erosion), agents of soil erosion.  Erosion control measures - contour cropping, strip cropping, mulching, terraces, bunds. Landslides-factors causing it, landslips, Measures for control. | Practice different control methods of soil erosion-contour ploughing, mulching, terracing, bunds, strips. |
| 12 | 4 | 1,6 | Field capacities & economics:  Terms related to Field performance of Machines- Theoretical Field Capacity, Theoretical Time per hectare and acres, Effective Field Capacity, Effective Operating Time, Field Efficiency, Performance Efficiency.  | Simple problems.  Visit the nearest farm and measure the field performance of machines and compare.       |
| 13 | 4 | 1,6 | Economics of machinery usage: 1.Fixed cost, variable cost. Depreciation – types-Straight line Method to calculate depreciation. 2. Operating cost, Estimation of cost of operation  | Simple problems.  |

## **8. Suggestive Activities for Tutorials:**

The List is an Example and not inclusive of all possible activities of the course. Students and Faculty are encouraged to choose activities that are relevant to the topic

| Sl.No. | Suggestive Activities for Tutorials  |  |  |  |  |  |
|--------|--|--|--|--|--|--|
| 01     | Prepare report or charts on locally available tractors, different systems observed on different tractors, different attachments used on tractor. |  |  |  |  |  |
| 02     | Visit any nearby tractor showroom and prepare a report on specification of different tractors.   |  |  |  |  |  |
| 03     | Visit a farmland and compare the operation of tillage by comparing rotavator and cultivator.   |  |  |  |  |  |
| 04     | Prepare a report to improve the efficiency of different Threshers.   |  |  |  |  |  |
| 05     | Collect and prepare a report on different types of fertilizer nozzels and applications of fertilizer methods.                                    |  |  |  |  |  |
| 06     | Suggest the effective use of drones in the agricultural fields.  |  |  |  |  |  |

Note: two activities, each activity for 50 marks with proper rubrics.

## 9 Rubrics for Assessment of Activity (Qualitative Assessment)

| 6.   | Hydraulic Power steering        | Integrated               | 2 sets      |
| 7.   | All implements and attachments. |                          | 1 set each. |
| 8.   | Drone with attachments          |                          | 2 sets.     |

## Government of Karnataka DEPARTMENT OF TECHNICAL EDUCATION

| Program                | AUTOMOBILE ENGINEERING           | Semester       | V            |
|------------------------|----------------------------------|----------------|--------------|
| Course Name            | ALTERNATIVE ENERGY<br>TECHNOLOGY | Type of Course | Integrated   |
| Course Code            | 25AT51IB                         | Contact Hours  | 8 hours/week |
| <b>Teaching Scheme</b> | L: T:P: 4:0:4                    | Credits        | 6            |
| CIE Marks              | 50                               | SEE Marks      | 50 (Theory)  |

- **1. Rationale:** The alternative energy technology course aims to highlight sustainable energy resources as fossil fuels are becoming extinct. The course would provide students with the knowledge, skills, and understanding necessary to navigate and contribute to this energy transformation.
- **2.** Course Outcomes: At the end of the Course, the student will be able to:

| CO-01  | Appreciate the importance of alternative energy sources.                                  |
|--------|---|
| CO-02  | Evaluate Hydropower and wind energy as viable alternatives to conventional energy sources |
| CO-03  | Asses solar energy as a viable alternative to conventional energy sources                 |
| CO-04  | Appraise tidal and geothermal as viable alternatives to conventional energy sources       |
| CO- 05 | Determine Nuclear and biogas as viable alternatives to conventional energy sources        |

#### 3. Course Content:

| WEEK | CO | PO  | Theory  | Practice  |
|------|----|-----|---|---|
| 1    | 1  | 1,7 | <ul> <li>Introduction to Energy and Environmental Issues</li> <li>Energy Concepts</li> <li>Energy Consumption and Global Trends</li> <li>Environmental Impact of Fossil Fuels</li> <li>The Need for Alternative Energy</li> <li>Renewable vs. Non-renewable energy sources</li> </ul> | Prepare a report on alternative energy sources utilized around your locality. |

|   |   |       | Hydro Power Plants  |   |
|---|---|-------|---|---|
| 2 | 2 | 1,5,7 | <ul> <li>Introduction</li> <li>Construction and working of hydroelectric power generation</li> <li>Types, Features of Run-of-river, Storage, Pumped-storage</li> <li>Components of hydro powerplants-List</li> <li>Advantages and disadvantages of Hydro power plants.</li> </ul>                           | Construct a working model of hydropower plant.  |
| 3 | 2 | 1,5,7 | <ul> <li>Wind Energy</li> <li>Introduction, Principles of wind energy conversion.</li> <li>Wind turbine - Need, Types, Construction and working of Horizontal-axis, and Vertical-axis wind turbine.</li> <li>Advantages and disadvantages of Wind turbines</li> </ul>                                       | <ul> <li>Practice to measure the wind speed</li> <li>Fabricate the wind direction indicator</li> </ul>  |
| 4 | 2 | 1,5,7 | <ul> <li>Construction of Wind turbine components- Blades, Gearbox, Generator, Controller</li> <li>Grid integration of wind energy and storage options.</li> </ul>   | Fabricate a small wind turbine  |
| 5 | 3 | 1,5,7 | <ul> <li>Solar Energy</li> <li>Introduction, Working principle</li> <li>Types of Solar energy technology,         Construction and working of         photovoltaic (PV) cells.</li> <li>Solar panel- Need, types,         Composition, and efficiency of         different types of solar panels</li> </ul> | <ul> <li>Practice on checking of voltage output of solar panel.</li> <li>Practice on connecting solar panels in series and parallel and check the voltage outputs.</li> </ul> |
| 6 | 3 | 1,5,7 | <ul> <li>Describe -Grid-connected and off-grid solar power systems, Comparison.</li> <li>Solar energy storage- Need, Types.</li> <li>Advantages and disadvantages of solar energy</li> </ul>  | Visit the nearby solar power stations and prepare a report on type of storage.  |

|    |   |       | Applications of solar energy in industries and homes  |   |
|----|---|-------|---|---|
| 7  | 3 | 1,5,7 | <ul> <li>Solar thermal power plant</li> <li>Introduction, Working principle of solar thermal power plant, Types.</li> <li>Working principle of Parabolic Trough Systems, Central Receiver (Power Tower) Systems, Parabolic Dish Systems, Linear Fresnel Reflector Systems.</li> <li>Advantages and disadvantages of Solar Thermal Power Plants</li> </ul>   | Construct a working<br>model of a solar energy<br>receiver.   |
| 8  | 4 | 1,5,7 | <ul> <li>Tidal Energy</li> <li>Introduction, Fundamentals of Tide,         Technologies for Harnessing Tidal         Energy.</li> <li>Concept and key components of Tidal         Stream Systems, Tidal Lagoons and         Dynamic Tidal Power.</li> <li>Construction and working of         Horizontal and vertical axis tidal         turbine</li> </ul> | Case study on Types of tidal power generation   |
| 9  | 4 | 1,5,7 | <ul> <li>Boilers - Introduction, Need, Types,         Construction and working of Fire tube         and water tube.</li> <li>Boiler mountings and accessories –         List, Construction of Water level         indicator, safety valve, blowoff valve,         pressure relief valve, economizer</li> </ul>  | <ul> <li>Identification of boiler components.</li> <li>Service the pressure relief valve, water level indicator</li> </ul>  |
| 10 | 4 | 1,5,7 | <ul> <li>Geothermal energy</li> <li>Introduction, Geology and Geothermal Resources.</li> <li>Geothermal Energy Technologies-Types, Construction and Working of Geothermal Power Plants- Dry Steam Power Plants, Flash Steam Power Plants.</li> <li>Geothermal heat pumps- Need, Construction and working of a geothermal heat pump.</li> </ul>              | <ul> <li>Practice to simulate the extraction of geothermal energy and demonstrate the concept of geothermal wells.</li> <li>Prepare a report on environmental impacts of geothermal energy production, particularly in terms of water usage and land disruption.</li> </ul> |
| 11 | 4 | 1,5,7 | • Enhanced Geothermal Systems (EGS)- Need, Construction and working.  | Demonstration of video<br>on Different types of geo<br>thermal power stations   |

## **8. Suggestive Activities for Tutorials:**

The List is an Example and not inclusive of all possible activities of the course. Student and Faculty are encouraged to choose activities that are relevant to the topic. (Max 2 activities)

| Sl.<br>N | Suggestive Activities for Tutorials   |
|----------|---|
| 0.       |   |
| 01       | Fabricate a small windmill, demonstrate its operation, and prepare a report       |
| 02       | Construct a circuit diagram for charging a battery for solar power                |
| 03       | Construct a plant model to extract flue gasses from the bio mass.                 |
| 04       | Construct equipment to convert solar energy to electricity.                       |
| 05       | Construct equipment to convert solar energy to heat energy.                       |
| 06       | Construct a equipment to convert stored energy in the water dam into electricity. |

# Government of Karnataka DEPARTMENT OF TECHNICAL EDUCATION

| Program                | Automobile Engineering               | Semester              | V            |
|------------------------|--------------------------------------|-----------------------|--------------|
| Course Name            | Vehicle Management and<br>Estimation | <b>Type of Course</b> | Integrated   |
| Course Code            | 25AT51IC                             | <b>Contact Hours</b>  | 8 hours/week |
| <b>Teaching Scheme</b> | L: T:P-4:0:4                         | Credits               | 6            |
| CIE Marks              | 50                                   | SEE Marks             | 50 (Theory)  |

1. Rationale: Vehicle management, and estimation are fundamental for organizations that rely on a fleet of vehicles for operations, transportation, logistics, service delivery, or any other function. Properly managing and maintaining vehicles, along with accurately estimating their costs and performance, reduce operational costs, and extend the lifespan of the vehicles.

#### 2. Course Outcomes: At the end of the Course, the student will be able to:

| CO-01 | Comply with organization structure of fleet, Traffic Rules, and Regulations.  |
|-------|---|
| CO-02 | Practice the process of maintaining different records related to service station for efficient management.                            |
| CO-03 | Appreciate the importance of regular inspections and maintenance schedules to ensure vehicle reliability, performance, and longevity. |
| CO-04 | Estimate the repair and replacement cost for automobile components.   |

#### 3. Course Content:

| WEEK | CO  | PO  | Theory  | Practice  |  |
|------|---|-----|---|---|--|
| 1    | Fleet management: Introduction, structure of fleet organization, Organization structure -Line organization, Functional organization, Flat organization, Hierarchical Structure. |     | structure of fleet organization, Organization structure -Line organization, Functional organization, Flat organization,   | Visit the nearest Transport service depot and prepare a layout of the organization structure.   |  |
| 2    | 1   | 1,6 | Fleet organization structure at depot level, administrative setup of District transport undertaking, administrative setup of state transport undertaking, EPKM, CPKM, route, vehicle schedule, trip, dead mileage | Visit the nearest Transport service depot and prepare a report on EPKM, CPKM, and Dead mileage. |  |

|   |   |     | 37 1 1 4 .   | 100   |
|---|---|-----|--|---|
| 3 | 1 | 1,7 | Motor Vehicle Act License- Driving license & conductor license — Procedure of obtaining License- Geared, LMV, commercial vehicles, PSV Badge. Procedure of obtaining international driving License. Traffic signs-Classification- Informatory, Cautionary, and mandatory. Road markings and Kerb Markings.  Motor vehicle insurance - Need, types. | Prepare a report on different types of traffic signs.  Visit the nearest RTO office and collect the different types of forms available and the procedure to obtain the Vehicle Registration and Different types of Permits.                                   |
| 4 | 1 | 1,7 | Number plates and its sizes — HSRP- Importance, Types - Whiteboard, Yellow board, green board, Black board, red board, blue Board, Number plates with upward arrow, Red with India's emblem, VIN – Importance, vehicle insurance – Introduction, Types. Scrapping of vehicle- Introduction, Procedure.   | Prepare a report on the necessity and importance of different types of number plates.  Practice on Evaluation of second-hand vehicle.   |
| 5 | 2 | 1,7 | Stores: Introduction, purpose of store keeping, duties of the storekeeper, Methods of storing – Shelf Storage, Bin Storage, Pallet Racking, Rack and Pinion (Cantilever) Storage, Drive-In / Drive-Through Racking, Vertical Lift Modules (VLM).  Bin card, indent, Invoice and Return Indent.   | Visit the nearest service station and prepare a report on the store and methods of storage.  Prepare a model layout on the tools and equipment available in your workshop and affix in proper order as per the storage method.                                |
| 6 | 2 | 1   | Service Station: Introduction, Types, Factors to start new service station, service station layouts, service station records.  | Visit the nearest service stations and draw the layout.  Estimate the tools and Equipment required to start a service station.  (Ex: High pressure washing and lubrication unit, Wheel alignment and tyre replacement centre, A/C Reconditioning center, etc) |
| 7 | 3 | 1,2 | Vehicle maintenance: Introduction,<br>Necessity of maintenance, Types –<br>Periodic, Preventive and Breakdown<br>Maintenance, Vehicle inspection   | Prepare a PDI checklist for delivery of 2-wheeler and 4-wheeler vehicles.   |

|    |   |     | checklists, vehicle inspection reports-PDI. log books, Job cards, and Workshop activities.  | Prepare a case study on preventive and breakdown maintenance of vehicles.   |
|----|---|-----|---|---|
| 8  | 3 | 1,2 | Estimation: Introduction to estimation & costing – aims of estimating – qualities of an estimator – procedure of estimating – sources of error in estimation – constituents of estimation.  | Solve simple problems on estimation and costing.  |
| 9  | 3 | 1,2 | Costing: Objectives of costing, elements, and components of costing - Direct Costs, Indirect Costs (Overheads), Fixed Costs, Variable Costs. The difference between estimation & costing.   | Solve simple problems on estimation and costing.  |
| 10 | 3 | 1,2 | <b>Depreciation</b> : Introduction to depreciation and obsolescence, causes of depreciation, methods of calculating depreciation – Straight line method, Declining balance method, sum of years digits method, problems on Straight-line method.                                  | Evaluate a vehicle considering depreciation and other factors to sell a vehicle.  Evaluate a vehicle considering depreciation and other factors to buy a vehicle.                 |
| 11 | 4 | 1,2 | Repair estimation: Procedure of preparing repair and replacement estimation of Engine components – Head gasket replacement, Cylinder head reconditioning, Timing belt replacement and adjustment, Valve reconditioning, Cooling system overhaul, and Lubrication system overhaul. | Prepare a repair estimation for Head gasket replacement.  Prepare a repair estimation for Cylinder head reconditioning.  Prepare a repair estimation for Radiator reconditioning. |
| 12 | 4 | 1,2 | Procedure of preparing repair estimation of Transmission system — Clutch overhaul, Gearbox overhaul, final drive overhaul.  Electrical system — Servicing of Alternator and Starter motor.  | Prepare a repair estimation for Clutch overhauling.  Prepare a repair estimation for Gearbox overhauling.  Prepare a repair estimation for starter motor reconditioning.          |
| 13 | 4 | 1,2 | Procedure of preparing repair and replacement estimation of Body and Paint — Dent repair, Fender replacement, Full paint job, Bumper repair, Door repair, Windshield  | Prepare a repair estimation for Fender replacement Prepare a repair estimation for Full body paint for a Car. Prepare a repair estimation for                                     |

|  | replacement. | Windshield replacement of a Car. |
|--|--------------|----------------------------------|
|  |              |                                  |
|  |              |                                  |

#### 18. Suggestive Activities for Tutorials:

The List is an Example and not inclusive of all possible activities of the course. Student and Faculty are encouraged to choose activities that are relevant to the topic

| Sl.No. | Suggestive Activities for Tutorials   |  |  |
|--------|---|--|--|
| 01     | Prepare a physical model of the service station.  |  |  |
| 02     | Prepare a Model of Traffic signs and road signs.  |  |  |
| 03     | Visit the nearest workshop and observe the process of vehicle receiving for servicing by the service advisor; Prepare a report on it. |  |  |
| 04     | Prepare a report on the tools and equipment required to start a two-wheeler service station.  |  |  |
| 05     | Visit the nearest workshop and prepare a report on the process of warranty claim.   |  |  |
| 06     | Prepare a report on insurance claims for motor vehicle  |  |  |

#### 19. Rubrics for Assessment of Activity (Qualitative Assessment)

| Sl.<br>No. | Dimension                           | Beginner            | Intermediate               | Good   | Advanced   | Expert  | Students<br>Score |  |

# DEPARTMENT OF TECHNICAL EDUCATION

| Program                | Automobile Engineering   | Semester             | V             |
|------------------------|--------------------------|----------------------|---------------|
| Course Name            | Manufacturing Technology | Type of Course       | Integrated    |
| Course Code            | 25AT52IA                 | <b>Contact Hours</b> | 07 hours/Week |
| <b>Teaching Scheme</b> | L: T:P, 3:0:4            | Credits              | 5             |
| CIE Marks              | 50                       | SEE Marks            | 50 (Practice) |

23. **Rationale:** This subject is designed to expose the student to wide range of manufacturing process including machining, moulding, casting, welding, and additive manufacturing. This exposure opens up opportunities for the student to work in various manufacturing industries.

#### 24. Course Outcomes: At the end of the Course, the student will be able to:

| CO-01 | Perform the different metal-cutting operations using conventional machines.                      |
|-------|--|
| CO-02 | Perform different metal joining operations using standard tools and procedure.                   |
| CO-03 | Perform surface finishing and casting-related activities using appropriate tools and procedures. |
| CO-04 | Perform different operations on CNC machines and 3D printing machine.                            |

#### 25. Course Content

| WEEK | CO | PO    | Theory  | Practice  |
|------|----|-------|---|---|
| 1    | 1  | 1,4,7 | Introduction to lathe-classification of lathe-construction and working of   | Identify types of lathes. Identify parts of centre lathe.   |
| 1    |    |       | centre lathe, operations performed on lathe-facing, cantering, plain turning.   | Practice on facing, centring and plain turning.   |
| 2    | 1  | 1,4,7 | Lathe operations-taper turning, thread cutting, knurling, drilling and boring.  | Practice on taper turning, thread cutting, knurling, drilling and boring process.   |
| 3    | 1  | 1,4   | Introduction to drilling machine-<br>types-construction and working of<br>bench drilling machine, Construction<br>and working of pillar drilling<br>machine.    | Identification of types of drilling machines. Identify parts of drilling machine. Drilling, boring, counter boring, counter sinking, and tapping.                           |
| 4    | 1  | 1,4   | Introduction to milling machine-<br>types-construction and working of<br>horizontal milling machine.<br>Operation- face milling, slot milling,<br>gear milling. | Identification of types of milling machine, identification of parts of horizontal milling machine, Practice the process of surface milling, slot milling, and gear milling. |
| 5    | 1  | 1,4   | Introduction to grinding- types of grinding machine-construction and working of surface grinder,  | Identification of type of grinding machine. Practice the process of surface grinding  |

|    |   |       | cylindrical grinder and center less grinder.  | and cylindrical grinding.  |
|----|---|-------|---|--|
| 6  | 2 | 1,4   | Welding-concept-types-arc welding process-applications, gas welding process-applications, Types of flames and their applications, List the common defects, reasons and remedies.  | Identification of arc welding machine parts.  Practice on fabrication of T-joint, but joint, lap joint.  Identification of gas welding equipment.  Practice generation of different flames.  Practice on joining two metal sheets using gas welding process.   |
| 7  | 2 | 1,4   | TIG welding process-applications, MIG welding process-applications, resistance arc welding (Seam and spot)-applications, electron beam welding-applications.  | Identify the parts of TIG, MIG, resistance welding, equipment. Practice the process of TIG and resistance welding process.   |
| 8  | 3 | 1,4   | Casting process-concept-types-sand mold casting-applications, centrifugal casting-applications, die casting-applications, investment casting-applications.  | Practice the process of Mould sand preparation. Practice the process of Mold making of round, square and hexagonal shape with centre hole. Practice the process of producing any one above mentioned casting shape.  |
| 9  | 3 | 1,4   | Patterns-types-materials for patterns, casting defects-prevention methods. Surface finishing process-buffing, polishing, electroplating and lapping.  | Practice the process of producing a pattern with all allowances. Practice the process of buffing using proper tools and procedure. Practice the process of lapping process with proper tools and procedure.  |
| 10 | 4 | 1,4,7 | Introduction to CNC machines-merits and demerits. Cartesian coordinate system (X, Y, Z axes). Machine vs. part coordinates. Zero points and reference points. Axis movements (absolute, incremental). CNC Programming Basics-G-codes and M-codes. Turning programs-Simple programs on linear interpolation, facing, plain turning, step turning, chamfering, taper turning without using standard cycles, | Identify the parts of typical CNC lathe and milling machine.  Machine Setup: Workpiece holding (clamps, vises <i>or</i> chucks, collets). Tool selection and mounting. Setting up the machine (zeroing, tool offsets). Simulation or execution of the facing, plain turning, step turning, chamfering and taper turning. |
| 11 | 4 | 1,4,7 | Turning programs- Simple programs on circular interpolation, write a program for a component consisting of all the above-mentioned features.  | Simulation or execution of the program written for the given component as per the drawing.   |
| 12 | 4 | 1,4,7 | Milling programs- Simple programs on linear and circular interpolation, write a program for a component consisting of linear and circular slots.  | Simulation or execution of the program written for the given component with above linear and circular slot features.   |

|    | 4 | 1,4,7 | Introduction to additive             | Practice on creating a 3D model of the |
|----|---|-------|--------------------------------------|--|
|    |   |       | manufacturing-types-merits and       | object to be printed.                  |
|    |   |       | demerits, working of fusion          | Practice on converting a 3D model      |
|    |   |       | deposition modelling-applications,   | format into . stl format.              |
| 13 |   |       | merits and demerits,                 | Practice on producing the 3D model     |
|    |   |       | Stereolithography-working-merits and | using FDM process.                     |
|    |   |       | demerits, working of Selective Laser | Practice on finishing the 3D model     |
|    |   |       | Sintering-applications-merits and    | printed.                               |
|    |   |       | demerits.                            | printed:                               |

## **8. Suggestive Activities for Tutorials:**

The List is an Example and not inclusive of all possible activities of the course. Students and Faculty are encouraged to choose activities that are relevant to the topic. Two activities, each for 50 marks should be evaluated with proper rubrics.

| Sl.No. | Suggestive Activities for Tutorials   |
|--------|---|
| 01     | Prepare a detailed report on various holding devices on a lathe.                          |
| 02     | Prepare a report on belt grinder.   |
| 03     | Prepare a report on plasma welding process.   |
| 04     | Fabricate a multi piece pattern.  |
| 05     | Visit a nearby industry and prepare a report on advanced manufacturing processes adopted. |
| 06     | Visit a nearby bakery and prepare a report on 3D printing technology used in the bakery.  |
| 07     | Prepare a report on various additive manufacturing process used in Automotive components. |

## 31. Rubrics for Assessment of Activity (Qualitative Assessment)

| Sl.                            | Dimension                          | Beginner            | Intermediate               | Good  | Advanced  | Expert  | Student |
|--------------------------------|------------------------------------|---------------------|----------------------------|---|---|---|---------|
| No.                            |                                    | 2                   | 4                          | 6   | 8   | 10  | sScore  |

# Government of Karnataka DEPARTMENT OF TECHNICAL EDUCATION

| Program                | Automobile Engineering                      | Semester              | V             |
|------------------------|---|-----------------------|---------------|
| Course Name            | Construction equipment and special vehicles | <b>Type of Course</b> | Integrated    |
| Course Code            | 25AT52IB                                    | Contact<br>Hours/Week | 07            |
| <b>Teaching Scheme</b> | L: T:P. 3:0:4                               | Credits               | 05            |
| CIE Marks              | 50  | SEE Marks             | 50 (Practice) |

- **1. Rationale:** Studying Construction Equipment and Special Vehicles as a subject stem from the growing importance of machinery in modern construction, infrastructure development, and heavy industries. Construction projects whether roads, bridges, buildings, or other large-scale developments require specialized equipment to ensure efficiency, safety, and quality.
  - c. Course Outcomes: At the end of the Course, the student will be able to:

| CO-01 | Classify equipment based on their function in construction projects   |
|-------|---|
| CO-02 | Perform the servicing of undercarriage and control system components. |
| CO-03 | Perform the servicing of levelling and loading equipment.             |
| CO-04 | Perform the servicing of material handling equipment.                 |

#### 2. Course Content:

| WEEK | CO | PO    | Theory  | Practice   |
|------|----|-------|---|--|
| 1    | 1  | 1,6,7 | Fundamentals of Earth Movers- Earth Moving Operations, Classification of Earth Moving Equipment based on application. Difference between Construction and Mining process. Key factors affecting load carrying capacity of earth moving equipment. | Identification of different types of construction equipment based on applications.  Prepare a report comparing mining and earthmoving equipment. |
| 2    | 2  | 1,4   | Tyre and tracked vehicles -<br>advantages and disadvantages,<br>Construction, and the functions of<br>undercarriage components of crawler<br>tractors.  | Identification of parts of the tracked vehicle undercarriage components.  Perform the Maintenance activities of undercarriage components.        |

|     |   |     | Steering mechanism- types,  | Identification of different parts of different               |
|-----|---|-----|---|--|
|     |   |     |   | steering system  |
| 3   | 2 | 1,4 | Construction and working- Hydraulic                                       | Servicing of Hydraulic power steering                        |
|     |   |     | Power Steering, Differential Steering.                                    | system.  |
|     |   |     | Tracked vehicle steering systems:   | Servicing of Clutch/ brake steering system                   |
| ā   |   |     | Construction and working of -   | between of cracen brake seering system                       |
| 4   | 2 | 1,4 | Clutch /brake steering system, planetary                                  | Servicing of Articulated steering system                     |
|     |   |     | steering system, Articulated Steering.                                    | ber vieling of the dedicated steering system                 |
|     |   |     | Dozers-need, Types, construction and                                      | Identification of parts of dozer,                            |
|     |   |     | working of Crawling dozers, wheel   | identification of parts of dozer blade                       |
|     |   |     | dozers. Construction and working of                                       | operating mechanism.   |
|     |   |     | blade operating mechanism.  |  |
| 5   | 3 | 1,4 | Motor grader-need, construction and                                       | Servicing of dozer blade hydraulic                           |
|     |   |     | working of blade operating mechanism.                                     | operating mechanism.   |
|     |   |     |   |  |
|     |   |     |   | Identification of parts of motor grader.                     |
|     |   |     |   |  |
|     |   |     | Power shovels-need, Types, construction                                   | Identification of parts of bucket operating                  |
|     |   |     | and working of Cable-Operated Shovels,                                    | mechanism (both hydraulic and rope).                         |
| 6   | 3 | 1,4 | Trenchers. Applications of each type.                                     | Servicing of hydraulic system in excavator.                  |
| · · |   |     | Excavators-need, Types, Construction                                      | Servicing of bucket operating mechanism                      |
|     |   |     | and working of Bucket and Turret  | (both hydraulic and rope).                                   |
|     |   |     | operating mechanism of excavators.  Loaders-Need, Types, Construction and | Identification of parts of bucket operating                  |
| _   |   |     | Working - Wheel Loaders (Front-End  | mechanism.   |
| 7   | 3 | 1,4 | Loaders), Backhoe Loaders, Articulated                                    | Servicing of bucket operating mechanism.                     |
|     |   |     | Loaders, advantages of each type.   | betweening of oucket operating meenanism.                    |
|     |   |     | Scrapers- need, types, Construction and                                   | Identification of parts of blade operating                   |
| 8   | 3 | 1 1 | working of Motor Scraper, Wheel   | mechanism.   |
| o   | 3 | 1,4 | Tractor Scrapers. Advantages of each                                      | Servicing of blade operating mechanism.                      |
|     |   |     | type.   |  |
|     |   |     | Compaction equipment-need, types,   | Identification of parts of roller.                           |
|     |   |     | Rollers- types, Construction and working                                  | Servicing of the steering system of tandem                   |
| 9   | 4 | 1,4 | of Vibratory Rollers, Static roller, Sheep                                | roller.  |
|     |   |     | foot roller, pneumatic rollers,   | Practice the process of ballasting of rollers.               |
|     |   |     | Tandem rollers. Advantages of each type.                                  |  |
|     |   |     | Cranes-need, types, Construction and                                      | Identification of parts of cranes.                           |
| 10  | 4 | 1,4 | working of Derrick crane, mobile cranes,                                  | Servicing of winch and boom operating mechanism.             |
|     |   |     | traveler crane overhead cranes and Tower cranes.                          | mechanism.   |
|     |   |     | Crushers-need, Types, Construction and                                    | Identification of parts of crushers.                         |
| 11  | _ | 4.4 | working of Jaw Crusher, Impact crusher,                                   | Visit a nearby field where the crushers are                  |
| 11  | 4 | 1,4 | Roller crusher.   | used and make a report on the types of                       |
|     |   |     |   | crushers and their applications.                             |
|     |   |     | Feeders- need, application; Screening                                     | Visit a nearby construction site and prepare                 |
|     |   |     | Equipment- need, application; Handling                                    | a report on how to handle, mix, and pour                     |
|     |   | ]   | Equipment- need, application; Batching                                    | concrete using different equipment.                          |
| 12  | 4 | 1,4 | and Mixing Equipment- Need,   |  |
|     |   |     | application; Ready-Mix concrete   |  |
|     |   |     | equipment- need, application Concrete                                     |  |
|     |   |     | pouring equipment- need, application.                                     | Identification of manta of fuery and 1 - 1                   |
| 13  | 4 | 1,4 | Front end loader- need, Types, Construction and working of wheel type     | Identification of parts of front-end loader and fork lifter. |
| 13  | • | 1,4 | and crawler type, Application.  | Practice on lubrication of front-end loader                  |
|     | 1 | 1   | and crawler type, Application.  | Tractice on fuorication of mont-thu loader                   |

| Fork lifter- Need, Types, Construction and working of Internal combustion types, Application. | and fork lifter. |

### 7. Suggestive Activities for Tutorials:

The List is an Example and not inclusive of all possible activities of the course. Students and Faculty are encouraged to choose activities that are relevant to the topic

| Sl.No. | Suggestive Activities for Tutorials  |
|--------|--|
| 01     | Visit nearby road construction site and prepare a report on construction equipment used.   |
|        | Visit nearby bridge construction site and prepare a report on construction equipment used. |
| 02     |  |
| 03     | Prepare a report on tracked vehicle undercarriage components.                              |
| 04     | Visit an apartment construction and prepare a report on different types of cranes used.    |
| 05     | Prepare a report on different hydraulic systems used in construction equipment.            |

Note: two activities, each activity for 50 marks with proper rubrics.

1. **Rationale:** The world of mobility is changing rapidly and electric and hybrid vehicles are at the forefront of this revolution. Learning about electric and hybrid vehicles is incredibly relevant in today's world due to the growing need for sustainable transportation solutions. The automotive industry is rapidly shifting towards electrification, making it crucial for engineers and professionals to understand the principles and technologies behind these vehicles. Studying electric and hybrid vehicles provides a deep understanding of electric motors, power electronics, battery systems, and control strategies, which are essential for designing, developing, and maintaining these vehicles. This provides lot of opportunities in design, manufacturing and maintenance of electric and hybrid vehicles.

#### **2. Course Outcomes:** At the end of the Course, the student will be able to:

| CO-01 | Compare the operating principles, performance characteristics, and environmental impacts of various electric, hybrid, and conventional vehicle power trains to choose appropriate technologies |
|-------|--|
| CO-01 | various electric, hybrid, and conventional vehicle power trains to choose appropriate technologies   |
|       | for the specific purpose.  |
| CO-02 | Diagnose common faults in battery and battery management systems using appropriate testing   |
|       | equipment and procedures.  |
| CO-03 | Diagnose common faults in electric and hybrid vehicle subsystems, such as, electric motors using appropriate testing equipment and diagnostic procedures.                                      |
| CO-03 | appropriate testing equipment and diagnostic procedures.   |
| CO-04 | Model basic electric and hybrid drive systems, including motor selection, power converter design,  |
| CO-04 | Model basic electric and hybrid drive systems, including motor selection, power converter design, and control strategies, using appropriate software tools and engineering principles.         |

#### 3. Course Content

| WEEK | CO | PO   | Theory   | Practice  |
|------|----|------|--|---|
| 1    | 1  | 1, 4 | <ul> <li>Introduction to EV:         <ul> <li>Introduction to electric vehicles - history and evolution of electric vehicles.</li> <li>Comparison between I.C Engine vehicles and Electric vehicles.</li> <li>Present market trends. Benefits and Challenges of EV's.</li> <li>Polices in India – Incentives, PLI (Production Linked)</li> </ul> </li> </ul> | <ul> <li>Prepare a report on comparison of ICE vehicle and EV vehicle of same make and model (ex: Tata Nexon ICE vs Tata Nexon EV).</li> <li>Prepare a report on ARAI rules and regulations on EVs. Compare different electric vehicle using their specifications.</li> </ul> |

|   |   |           | Incentive) scheme.  |  |
|---|---|-----------|---|--|
| 2 | 2 | 1         | <ul> <li>Battery swapping policy. Special E-mobility zone.</li> <li>Electric vehicle registration. Road tax exemptions and subsidies.</li> <li>Driving license policies for EV. Number plate policies for EV.</li> <li>ARAI regulations for EV.</li> </ul>  | Visit the nearest RTO office and prepare a report on EV registration, driving license and number plate policy of EVs.  |
| 3 | 2 | 1, 4      | <ul> <li>Types of EVs. Components of EV. Working of EV with its layout.</li> <li>Battery-introduction-types.         <ul> <li>Lithium-ion battery-types-construction and working Lithium polymer battery.</li> </ul> </li> <li>Types of lithium-ion cell architecture -cylindrical, pouch type, prismatic typemerits and demerits of each type.</li> <li>Construction and working of Aluminum air battery.</li> </ul> | <ul> <li>Identification of components of 2-wheeled and 3-wheeled EV. Check cell voltage, Ampere-hour capacity of a Lithium-ion cell using standard procedure.</li> <li>Check the state of charge of a Lithium cell by measuring its voltage and temperature.</li> <li>Identify the cell capacities by colour codes.</li> </ul> |
| 4 | 2 | 1,<br>4,5 | <ul> <li>Battery pack - selection criteria. Battery packs construction.</li> <li>Battery management system - functions. Layout of a BMS - functions of key components.</li> <li>State of charge and state of health. Battery cell balancing-active and passive.</li> <li>Recycling and disposal of EV batteries.</li> </ul>   | <ul> <li>Practice to build battery pack with series and parallel configuration.</li> <li>Practice on replacing the battery pack in two-wheelers with safety measures.</li> </ul>   |
| 5 | 2 | 1, 4      | <ul> <li>Fuel cells – types. Layout out of fuel cell vehicle with function of each component. Signature of the HOD

#### 9. Suggestive Activities:

The list is an example and not inclusive of all possible activities of the course. Students and Faculty are encouraged to choose activities that are relevant to the topic. Two activities, each for 50 marks should be evaluated with proper rubrics.

| Sl.No. | Suggestive Activities   |
|--------|---|
| 01     | Visit your nearest RTO and collect information regarding registration of EV, driving policy of EV, number plate policy of EV and prepare a report.  |
| 02     | Explore the differences between various types of EV batteries and prepare a presentation on their findings on key attributes like energy density, charge times, and environmental impact. |
| 03     | Measure the battery voltage, charge it to full capacity, and then discharge it using a resistive load while tracking the current and voltage drop. Calculate the capacity of the battery. |
| 04     | Using an online simulation tool or BMS software, simulate the charging and discharging of a battery pack.   |
| 05     | Give presentation on different types of fuel cells used in EVs.   |
| 06     | Use wireless charging technology to charge a small toy car to show how inductive charging works without physical connections by placing the car on the charging pad.                      |
| 07     | Prepare a presentation and report on the latest advancements in EV charging infrastructure.   |
| 08     | Prepare a report on different motors used in EVs with their advantages and disadvantages.   |
| 09     | Prepare a presentation on how much energy can be recovered during regenerative braking and the impact of this on the overall efficiency of electric vehicles.                             |
| 10     | Using simulation software, show how the <b>motor</b> , <b>fixed gear system</b> and <b>differential</b> work together to drive the wheels of an electric vehicle.                         |
| 11     | Build a simple hybrid vehicle model using toy car chassis, small DC motor and additional motor to simulate the IC engine and demonstrate how a hybrid vehicle works.                      |
| 12     | Prepare a presentation on single shaft and double shaft configurations connections of motor and engine showing how the motor responds to changes in load and speed.                       |
| 13     | Simulate electric vehicle systems using simulation software and show the working of EV components.  |

10. Rubrics for Assessment of Activity (Qualitative Assessment)

| Sl.   | Dimension                          | Beginner            | Intermediate               | Good  | Advanced  | Expert  | Student |

- **1. Rationale:** Knowledge of Python programming for Automobile engineers is essential to increase the productivity and efficiency by automating tasks, getting insights from data, data visualization, optimization of design, and simulation of engineering problems.
- **2. Course Outcomes:** At the end of the Course, the student will be able to:

| CO-01 | Choose, Install and setup the appropriate development environment of python.  |
|-------|---|
| CO-02 | Write simple programs using different data types and operators of python to solve simple  |
|       | automobile engineering related problems.  |
| CO-03 | Construct simple programs using different python programming concepts such as control flows,  |
|       | Construct simple programs using different python programming concepts such as control flows, list, arrays and functions to solve simple automobile related problems.            |
| CO-04 | Develop programs using different additional libraries such as NumPy, SymPy, and Matplotlib to   |
|       | Develop programs using different additional libraries such as NumPy, SymPy, and Matplotlib to solve automobile engineering related problems and visualize the data and results. |

#### 3. Course Content

| WEEK | CO | PO  | Theory   | Practice  |  |
|------|----|-----|--|---|--|
| 1    | 1  | 1,4 | Introduction to python, History of python, Feature of python. Python distributions, python applications, python IDE. Down loading python and installing python.                      | Prepare a report on use of python in automobile engineering domain. Downloading and installing python from official website.  Practice the use of built in IDLE of python.  |  |
| 2    | 1  | 1,4 | Features of anaconda distribution. Features of Jupiter notebook. Best practices of python programming. Importance of indentation and comments. Character set used in python, Tokens- | Download anaconda distribution of the python and list its features, set up Jupiter notebook.  Write a simple program to show the syntax of writing comments.  Write the simple program to the show the errors with improper use |  |

|    | I | 1     | 77 1   | C. 1 11. AT IDEE  |
|----|---|-------|--|---|
|    |   |       | concept, types, Keywords, Identifiers, rules to name an identifier, literals or values-types, operators, punctuators, Variables  | of indentation. (Use IDLE or any other interpreter for python) Simple programs to show the use of identifiers, literals, operators, punctuators, and variables.   |
| 3  | 2 | 1,3,4 | Input and output functions, concept-<br>syntax, Data -concept-types-string,<br>integers, complex numbers and<br>Boolean, Type casting-concept-type<br>casting syntax to convert different data<br>types.   | Write a simple program to input a string and output it. Write simple programs to input and output string data, integer data, float data and complex number data. Write simple programs to show converting one data type to other data type. |
| 4  | 2 | 1,3,4 | Operators-concept-types, arithmetic operators-concept-types, comparison/relational operators-concept-types, logical operators-concept-types  | Simple programs to show the syntax of arithmetic operators, relational operators and logical operators.   |
| 5  | 2 | 1,3,4 | Assignment operators-concept-types, string operators-concept-types-operator precedence-concept-need.   | Simple programs to show the syntax of assignment operators, and string operators, simple programs to show the importance of operator precedence.  |
| 6  | 3 | 1,3,4 | Control-flows-concept-types-<br>conditional statement-if statement-<br>concept-syntax, if-else statement-<br>concept-syntax, nested if statements-<br>concept-syntax   | Simple programs to show the syntax of if statement, if-else statement and nested if statements.   |
| 7  | 3 | 1,3,4 | Control flows-loops-concept-types-<br>while loop-concept-syntax, for loop-<br>concept-syntax, range function-<br>concept-syntax, else and break-concept<br>and syntax. Nested while and for<br>loops-concept and syntax.   | Simple programs to show the syntax for while loop, for loop, for loop with range function, else and break statements.  Simple programs to show the syntax of nested while and for loops.  |
| 8  | 3 | 1,3,4 | Data collection-concept-types, Lists-concept-syntax of creating lists, creating list from tuple, set, and string-concept-syntax, accessing list elements, unpacking list-concept-syntax, changing list elements-concept-syntax, functions used with list-count (), index (), reverse (), sort ()-concept-syntax. | Simple programs to show the syntax of creation of list, accessing list elements, unpacking of list elements, and functions used with lists.   |
| 9  | 3 | 1,3,4 | Arrays in python-concept-syntax to create single row and multi-dimensional arrays. Compare lists and arrays, length of array, sum of elements of array. Addition of two arrays. Scalar multiplication of arrays, dot multiplication of two multidimensional arrays.  | Simple programs to show the syntax and process of addition and subtraction of two arrays. Simple programs to show the syntax and process of scalar multiplication and dot multiplication of arrays.   |
| 10 | 3 | 1,3,4 | Functions-concept-syntax of defining   | Simple programs to show syntax  |

|    |   |       | and calling functions, recursive<br>functions concept-syntax, modules-<br>concept-syntax of creating and<br>importing modules, packages-concept-<br>creating and using packages.             | and process of defining functions and calling functions, modules and packages.   |
|----|---|-------|--|--|
| 11 | 4 | 1,3,4 | Sym-Py module-concept-syntax to find limits of expressions, first differentiation and second differentiation of expressions, syntax to find indefinite and definite integral of expressions. | Simple programs to show syntax and process of finding limits, first derivation, second derivation, indefinite integral and definite integral.                                    |
| 12 | 4 | 1,3,4 | Num-Py module-applications, Sci-Py module-applications, matplotlib module-applications. Importing the modules  | Simple program to show the syntax of finding sum, mean and standard deviation of data set.  Draw the P-V diagrams for constant pressure, constant volume and isentropic process. |
| 13 | 4 | 1,3,4 | Syntax to create single line chart, multi-line chart, single bar chart, multi bar chart, scatter chart, controlling each parameter of the chart.   | Write a program to draw shear force and bending moment diagrams for different conditions. Write the program to draw thermodynamic process and cycles of different IC engines.    |

Note; To explain the programs use automobile engineering related data and expressions.

#### 1. Rationale:

In today's manufacturing landscape, industries are rapidly transitioning towards complete automation. Small and medium-sized enterprises are increasingly adopting PLC (Programmable Logic Controller) and Human Machine Interface (HMI) technologies for data acquisition and process control. Industrial automation systems are used to monitor and control processes, machines, or devices in a computerized manner, typically handling repetitive tasks. These systems are designed to function autonomously, reducing the need for human intervention and improving efficiency across the industry. The benefits of this technology include higher production rates, increased productivity, more efficient material usage, better product quality, improved safety, shorter workweeks for labor, and reduced factory lead times. Automation engineers are responsible for designing, programming, simulating, and commissioning automated machinery and plant-wide processes to perform various functions. Depending on the size of the organization, the engineer may take on all or part of these responsibilities. It is essential for diploma engineers to acquire knowledge of both PLC and other automation technologies, as these are the backbone of industrial automation.

This course is designed to introduce the fundamental theoretical and practical concepts of automation technologies, helping students develop the operational competencies needed in this field. As a result, it serves as a foundational course for diploma engineers who wish to specialize in industrial automation.

#### **2. Course Outcomes:** At the end of the course, the student will be able to:

| CO-01 | <b>Select</b> the appropriate sensor, actuator and other hardware components for a given automation application. |
|-------|--|
| CO-02 | Integrate various hardware components to implement a specified automation system.                                |
| CO-03 | <b>Develop</b> ladder program for simple automation applications.  |
| CO-04 | <b>Appreciate</b> the application of automation concepts and technologies used in Industry 4.0.                  |

Note: Course Coordinators may define their own Course Outcomes (COs) based on the TLP they follow

#### 10. Suggestive Activities for Tutorials:

The list is an example and not inclusive of all possible activities of the course. Student and Faculty are encouraged to choose activities (minimum six) that are relevant to the topic.

| Sl.<br>No. | Suggestive Activities for Tutorials  |
|------------|--|
| 01         | Visit a nearby washing machine, refrigerator, or air conditioning repair shop. Observe and study the system's various components. Record a video showing the operation and components, and upload it to Google Classroom or any other platform as directed by the course coordinator. Additionally, prepare a handwritten report (maximum 200 words) that includes a block diagram of the system, illustrating how the components are interconnected, with a focus on sensors, actuators, and controllers. |
| 02         | Create a ladder logic program to automate a "Water Level Controller" using Open PLC software. Implement the program on an <b>Arduino Board</b> and interface it with the necessary hardware components to demonstrate its operation. <i>Reference:</i> Open PLC Project Guide  |
| 03         | Develop a simple relay circuit to switch ON/OFF an LED using Tinker CAD online simulation software. <i>Reference: Tinker CAD</i>   |

| 04 | Design a ladder diagram to measure room temperature using an LM35 temperature sensor and demonstrate the interfacing process.   |
|----|---|
| 05 | Write a <b>Python program</b> to switch a 5V LED on and off using a <b>Raspberry Pi GPIO</b> pin. Reference: https://www.youtube.com/watch?v=IP-szuon2Bk  |
| 06 | Write a <b>Python program</b> to turn an LED ON when the temperature (read from a sensor like DHT11) exceeds a certain threshold and OFF otherwise using a <b>Raspberry Pi GPIO</b> pin.  |
| 07 | Prepare a PowerPoint presentation on a proximity sensor manufactured by a selected company. The presentation should include at least 10 slides.  Note: The course coordinator may assign each student a specific company and sensor type.   |
| 08 | Visit one of the following industries: Milk Packing Unit, Paint Industry, Food Packing Industry, or Drinking Water Bottling Unit. Prepare a concise report detailing the automation systems used, including SCADA, HMI, DCS, PAC, RTU, or any other system.  Note: Collect information about SCADA, HMI, DCS, PAC and RTU or any other automation system used in the Industry. Reference.www.industrialautomation.us/case-studies/ as on 02/10/2024 |

11. Rubrics for Assessment of Activity (Qualitative Assessment)

Note: Dimension and Descriptor shall be defined by the respective course coordinator as per the activities

#### 12. SEE- Model Practice Question Paper

| Program                       | Diploma in Automobile Engineeri | ng                    | Semester | V       |  |  |
|-------------------------------|---------------------------------|-----------------------|----------|---------|--|--|
| <b>Course Name</b>            | Industrial Automation           | Course Code: 25AT53IB | Duration | 180 min |  |  |
| Note: Answer any one question |                                 |                       |          |         |  |  |

| Questions   | CO  | Marks |
|---|-----|-------|
| <b>Note</b> : During the SEE, All questions will be distributed among the group. Each student will be assigned one of the following questions by the examiner, without offering any choice.   |     |       |
| 1. For an automatic door system using an optical sensor, select the appropriate sensor, actuator, and other necessary hardware components. Develop a ladder program that controls the door's opening and closing.   |     |       |
| 2. Design a pneumatic system that automates the sequencing of two cylinders. Identify the suitable sensors and actuators for this application and integrate them into a functional system. Write a ladder program for cylinder sequencing.                |     |       |
| 3. For a three-level safety alarm system, select the appropriate sensors and internal relays to trigger alarms based on certain conditions. Develop a ladder program using latching instructions.   | 1,2 | 50    |
| 4. Select and interface the required components for a water level monitoring system using an analog level gauge. Write a ladder program using "Any to Real" and "SCALAR" instruction blocks to measure and display the water level.                       |     |       |
| 5. For a mixer system where two tanks supply liquids simultaneously, select the proper sensors, actuators, and timers to control the flow. Develop a ladder program using timers for this automation.   |     |       |
| 6. Design an automation system for controlling a conveyor belt. Choose the appropriate hardware to count items moving on the belt and then develop a ladder program to manage the counting.   |     |       |
| 7. For a lift system that operates between three floors, identify the necessary sensors, actuators, and other hardware. Develop a ladder program to control the lift's movement, including the detection of floor levels.                                 |     |       |
| <ul><li>8. Select the sensors and actuators for controlling a traffic light system at an intersection. Integrate the components and write a ladder program to manage the light sequencing based on a timer.</li></ul>                                     |     |       |
| 9. For a car parking barrier system, identify the necessary sensors, actuators, and timer instruction blocks. Develop a ladder program to automate the opening and closing of the barrier.  |     |       |
| 10. Develop an automation system for a pneumatic gripper that picks objects from a conveyor belt and places them in bins. Select and integrate the appropriate sensors, actuators, and hardware, then write a ladder program for the gripper's operation. |     |       |
| Scheme of Assessment  |     |       |
| <ul> <li>a. Select the appropriate sensor, actuator and other hardware components for a given automation application.</li> <li>Note: Includes Aim of the practical, List of Components Required</li> </ul>  | CO1 | 5     |
| b. Integrate different hardware components with a Programmable Logic Controller (PLC) for a specified automation system.  Note: Includes Explanation, Procedure writing and Circuit diagram using IEC   | CO2 | 10    |
| standard Symbols in addition to PLC integration with input and output components.  c. Develop ladder program for given automation applications, download and automating   |     |       |
| the system  Note: Includes ladder programming and result writing in addition to automating the given problem.   | CO3 | 25    |
| d. Viva   |     | 10    |

## 13. Equipment/software list with Specification for a batch of 30 students

| Sl.<br>No. | Particulars                            | Specification  | Qty.       |
|------------|--|--|------------|
| 01         | Computers                              | Latest Configuration   | 10         |
| 02         | Programmable Logic<br>Controller (PLC) | Minimum 12, 24V DC Inputs, 4 configurable analog input with thermistor voltage reference out, 7 24V DC Source Output, 1 Analog Output, Embedded Ethernet Port and RS-232/485 non-isolated Serial port, Embedded RTC, MicroSD Card support and minimum 2 Plug-In slots. | 10         |
| 03         | 24 VDC Power Supply                    | 24 V, 10A DIN Rail Mountable   | 10         |
| 04         | 12 VDC Power Supply                    | 12 V, 5 A, DIN Rail Mountable  | 10         |
| 05         | Push Button                            | Push Button Industrial Grade with NO and NC Elements- 22 mm diameter   | 50         |
| 06         | Key Switch                             | Key Switch with NO and NC Elements - 22 mm diameter  | 5          |
| 07         | Rotary Switch                          | 2/3 Position Rotary Switches with NO Elements - 22 mm diameter   | 15<br>Each |
| 08         | Emergency Stop                         | Industrial Grade Mushroom Types switch with NC element -22 mm diameter   | 10         |
| 09         | Toggle Switch                          | 2/3 Position Toggle Switch   | 5 Each     |

| 10 | Float Sensor  | Float Sensor for Water Level detection   | 10         |
|----|---|--|------------|
| 11 | Buzzer  | 24VDC, 22mm  | 04         |
| 12 | Level Gauge   | Analog Water Level Gauge (minimum 30 cm Height)  | 02         |
| 13 | Limit Switches Industrial Grade Roller Type/lever operated Limit Switch (NO/NC) |  | 10         |
| 14 | Proximity Sensors (PNP Only)  | Inductive, Capacitive and Optical Proximity Sensors (Available Size M8/M12/M18/M30 diameter)                     | 20<br>Each |
| 15 | Pneumatic Reed<br>Switch  | Pneumatic Magnetic Reed Switch NO/NC,<br>Used in Pneumatic Cylinder  | 10         |
| 15 | Water Solenoids   | 24 VDC water Solenoid  | 10         |
| 16 | Geared Motor  | DC Geared Motor  | 10         |
| 17 | Pneumatic Cylinder  | 20 mm bore 100/150 mm stroke   | 6          |
| 18 | Twin Cylinder   | Dual rod cylinder with guide function for pick & place applications, 10/12 mm rod diameter, 125 mm stroke length | 2          |
| 19 | Direction Control<br>Valve (DCV)  | 5/2 Single Solenoid DCV  | 2          |

| 20 | Direction Control<br>Valve(DCV)     | 5/2 Double Solenoid DCV   | 2 |
|----|-------------------------------------|---|---|
| 21 | Direction Control<br>Valve(DCV)     | 3/2 single Solenoid DCV   | 2 |
| 22 | Pneumatic vacuum<br>Generator       | 0.5 to 10 BAR   | 2 |
| 23 | Vacuum Suction Cup<br>Gripper       | Round, oval, and bellow shaped  | 2 |
| 24 | Stepper Motor                       | NEMA 23 Stepper motor 10kg/cm, 4 wired  | 4 |
| 25 | Stepper Driver                      | TB6600 Stepper Motor Driver Controller 4A 9~42V TTL 16 Micro-Step   | 4 |
| 26 | Pulse Generator                     | Stepper Motor Driver Controller 8A Dual Mode Function Signal Generator, 1Hz-150KHz PWM Motor Speed Regulation/LCD Pulse Frequency Cycle Module Adjustable Driver Module Signal Generator  | 2 |
| 27 | AC Motor                            | 3 Phase AC Motors   | 1 |
| 28 | Variable Frequency<br>Drive(VFD)    | AC drive which offer a power rating of 0.422 kW (0.530 Hp) with global voltage classes of 100600V, provide a variety of motor control and flexible mounting options.  | 1 |
| 29 | Lift Model                          | The trainer must be a miniature model of a three/four-layer elevator, fully replicating real elevator functions with easy PLC interfacing. It provides hands-on training in PLC programming, sensor integration, position control, and sequential logic control for elevator automation systems.  | 1 |
| 30 | Conveyor Model                      | The trainer should feature a DC geared motor-operated flat belt conveyor, 3.5-inch width and minimum 2 feet length, easily interfaced with PLC. It provides hands-on training in PLC programming, motor control, and automation processes, simulating real-world conveyor operations.   | 1 |
| 31 | Car Parking Barrier                 | The trainer should be a miniature model of a car parking barrier system with functional entry and exit arms, similar to those at toll plazas, easily interfaced with PLC. It should also include car full indicators that activate when parking capacity is reached.  | 1 |
| 32 | Automatic Door Open<br>Close System | The trainer should be a miniature model of an Automatic Door Open-Close System powered by a DC-geared motor, incorporating optical sensors and limit switches for accurate motion detection and control. The model should be easily interfaced with a PLC, providing hands-on training in motor control, sensor integration, and sequential logic operations. | 1 |
| 33 | Mixer Model                         | The trainer should be a miniature model of an industrial Mixer System with water solenoids for precise control in each jar. It should feature PLC-interfaced controls for automatic or manual operation of the mixing cycles.   | 1 |
| 34 | Raspberry Pi Board                  | Raspberry Pi 5 Model 8GB, Processor-64-bit Arm Cortex-A76 CPU RAM: 8GB LPDDR4 SDRAM with power supply   | 5 |
| 35 | Arduino Board                       | Uno R3 Board with Power Supply  | 5 |

- 1. Rationale: The Industrial Internet of Things (IIoT) is transforming industries by integrating digital technologies, advanced sensors, and communication networks. The convergence of physical and digital systems has revolutionized manufacturing and other sectors, making processes smarter and more efficient. For Mechanical Engineering students, learning IIoT equips them with the knowledge to design, implement, and maintain systems for data acquisition, analysis, and automation in real-time industrial environments. Additionally, the application of IIoT in automobiles, including connected car technologies, smart sensors, and safety systems, provides real-world relevance for students aspiring to work in manufacturing or automotive industries. This course covers foundational IIoT concepts, sensors, automation, and their applications, aligning well with Industry 4.0.
  - **2. Course Outcomes:** At the end of the Course, the student will be able to:

| CO-01 | <b>Apply</b> IIoT technologies to design and implement smart industrial systems, integrating sensors, actuators, and automation to enhance efficiency, productivity, and predictive maintenance.                |
|-------|---|
| CO-02 | <b>Develop and integrate</b> IoT-based monitoring and control systems for industrial and automotive applications, utilizing real-time data acquisition, cloud computing, and analytics to optimize performance. |
| CO-03 | <b>Implement</b> IIoT-driven safety and efficiency solutions in automobiles, including connected car technologies, ADAS, ABS, and vehicle-to-vehicle communication to enhance road safety and automation.       |
| CO-04 | <b>Analyze and process</b> IIoT-generated data using cloud platforms, edge computing, and AI-driven analytics to improve decision-making, energy efficiency, and sustainability in industrial systems.          |

#### 3. Course Content

| WEEK |    |           |   | Practice  |  |
|------|----|-----------|---|---|--|

#### 4. List of Experiments

- 1. **Interfacing temperature and humidity sensors with Raspberry Pi/Arduino:** In this practical, students will interface a temperature and humidity sensor (DHT11) with Raspberry Pi/Arduino, read sensor data, and send it to a cloud platform (Thing Speak) for real-time monitoring.
- 2. **Setting up IoT Communication on Raspberry Pi using MQTT**: To implement an IoT-based automatic water level monitoring system using MQTT protocol for real-time data exchange between sensors and a pump controller.
- 3. **Setting up IoT Communication CoAP Protocol with Arduino:** To implement the CoAP protocol on an Arduino device for smart home automation, enabling remote control of lighting systems via a CoAP server, while understanding request-response mechanisms and the advantages of lightweight UDP-based communication in IoT applications.
- 4. **HTTP Communication for IIoT Data Collection**: To implement HTTP-based communication on a Raspberry Pi/Arduino for real-time IIoT data collection, by sending liquid flow sensor data from a pipeline system to a web server (e.g., Thing Speak, Node-RED) for leak detection and flow monitoring.
- 5. **Secure IoT Communication using SSL/TLS:** To implement secure IIoT communication using SSL/TLS encryption by configuring an MQTT broker (Mosquitto) with certificate-based authentication, ensuring encrypted data transmission between Arduino in a smart factory environment, where machine status data is securely transmitted to a central monitoring system to prevent unauthorized access and data breaches.
- 6. **Setting up IIoT Systems for Predictive Maintenance**: To develop a predictive maintenance system using IIoT sensors and Raspberry Pi to monitor a motor's condition(e.g., vibration, temperature, speed), analyze real-time data on a cloud platform (e.g., Thing Speak), and detect abnormal trends for early failure prediction in industrial environments.
- 7. **Production Line Monitoring with IoT**: To simulate a smart production line by integrating IIoT sensors with a conveyor belt system, using Raspberry Pi to monitor motor speed, belt position, and efficiency, enabling real-time performance analysis and bottleneck identification for improved industrial automation.
- 8. **Quality Control System Using IIoT**: To develop an IIoT-based quality inspection system for an automated packaging line, utilizing weight sensors to detect defects, ensure compliance with specifications, and trigger real-time alerts or corrective actions for improved product consistency and efficiency.

- 9. **Energy Consumption Monitoring in Manufacturing**: To develop an IIoT-based energy management system for monitoring and analyzing real-time energy consumption in a manufacturing setup, enabling energy efficiency optimization and sustainability improvements through data-driven insights.
- 10. **Cyber-security in IIoT**: Implementing secure IIoT communication in a smart home environment by encrypting sensor data (e.g., door status, lighting, energy usage) using AES encryption on a Raspberry Pi and securely transmitting it to a cloud platform for real-time monitoring and automation.
- 11. **Edge Computing in HoT:** In a smart warehouse, a Raspberry Pi is installed to monitor real-time inventory movement using RFID and weight sensors. The edge device processes local stock data, only sending critical updates (e.g., low stock alerts) to the cloud, thereby reducing network congestion, ensuring faster decision-making, and optimizing warehouse operations.

#### **IIoT in the Automotive Industry:**

- 12. **Simulation of Vehicle-to-Vehicle (V2V) Communication Using Raspberry Pi**:- To develop a simulated Vehicle-to-Vehicle (V2V) communication system using Raspberry Pi and wireless modules to exchange real-time traffic data, enabling hazard detection and enhancing vehicle safety
- 13. Implementation of Lane Departure Warning (LDW) System with Camera and Sensors: To develop a basic lane departure warning system using cameras and sensors to detect lane positions, process images, and alert drivers upon unintended lane deviations, enhancing road safety.
- 14. **Designing Adaptive Cruise Control (ACC) System with IoT Sensors**: To design a basic adaptive cruise control system using IoT sensors to monitor distance, adjust vehicle speed dynamically, and enhance safety by maintaining a safe following distance in varying traffic conditions.
- 15. **Building a Smart Parking System Using IoT Sensors**: To develop a smart parking system using IoT sensors to detect available spaces, provide real-time occupancy data, and enhance parking efficiency through an IoT-based dashboard.
- 16. **Implementing Cloud-Based Data Storage for HoT Systems** Students will understand how to collect, process, and store HoT data in the cloud. They will gain experience in cloud communication using MQTT and HTTP protocols. Learn real-time monitoring and analytics for industrial applications.
